Installer/User Guide
USA Notification

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canadian Notification

This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Japanese Notification

この装置は、情報処理装置等電波障害自主規制協議会（V C C I）の基準に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されます。

Safety and EMC Approvals and Markings

UL, FCC, cUL, ICES-003, CE, GS, VCCI, MIC, C-Tick, GOST
**Instructions**

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

**Dangerous Voltage**

This symbol is intended to alert the user to the presence of uninsulated dangerous voltage within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

**Power On**

This symbol indicates the principal on/off switch is in the on position.

**Power Off**

This symbol indicates the principal on/off switch is in the off position.

**Protective Grounding Terminal**

This symbol indicates a terminal which must be connected to earth ground prior to making any other connections to the equipment.

Features and Benefits

Avocent AutoView 3050/3100/3200 switches combine analog and digital technology to provide flexible control of data center servers, and to facilitate the OA&M (operations, activation and maintenance) of remote branch offices where trained operators may be unavailable. The AutoView 3050/3100/3200 switches provide our customers with a significant reduction of cable volume, secure remote access and flexible server management from anywhere at anytime.

The AutoView 3050/3100/3200 KVM switch family has several options depending on the model:

- a rack mountable keyboard, video and mouse (KVM) switch, configurable for analog (local) or digital (remote) connectivity
- video resolutions supported up to 1280 x 1024 for remote users
- enhanced video quality of up to 1600 x 1200 available to local users via the video port
- accessibility to target devices across 10/100 or 1000BaseT (some models) LAN port(s)
- AutoView 3100/3200 switches feature 16 ports, while the AutoView 3050 switch has 8 ports

Reduce cable bulk

With server densities continually increasing, cable bulk remains a major concern for network administrators. The AutoView 3050/3100/3200 switches significantly reduce KVM cable volume in the rack by utilizing the innovative IQ module and single, industry-standard Unshielded Twisted Pair (UTP) cabling or the Integrated Access Cable (IAC) cabling option. This allows a higher server density while providing greater airflow and cooling capacity.

NOTE: All references to IQ modules in this document use the AVRIQ module as a default, except where indicated differently. The AutoView 3050/3100/3200 switches support Avocent AVRIQ, DSRIQ and DSAVIQ modules as well as Avocent Integrated Access Cables (IAC modules).

The IQ module and IAC are powered directly from the target device and provides Keep Alive functionality when the switch is not powered. The serial IQ module is a DCE device that provides the primary interface between a serial device and an AutoView 3050/3100/3200 switch. It provides VT100 terminal emulation, break suppression and port history in a compact, convenient module.
Access the AutoView 3050/3100/3200 switch via a standard TCP/IP network

The Avocent AutoView 3050/3100/3200 switches provide agentless remote control and access. No special software or drivers are required on the attached, or client, computers.

**NOTE:** The client connects to the AutoView 3050/3100/3200 switch using an Internet browser.

---

AutoView 3050/3100/3200 Switch Connectivity

The AutoView 3050/3100/3200 switching system transmits keyboard, video and mouse (KVM) information between operators and target devices attached to the switch over a network using either an Ethernet or modem connection.

The AutoView 3050/3100/3200 switch uses TCP/IP for communication over Ethernet. Although 10BaseT Ethernet may be used, Avocent recommends a dedicated, switched 100BaseT or 1000BaseT network for switches that support it.

Installation Overview

The general procedure for setting up and installing an AutoView 3050/3100/3200 switch is as follows:

- Unpack the switch and verify that all components are present and in good condition.
- Make all hardware connections between the power source, switch, target devices, the Ethernet and the optional modem connection.
- Turn on the power and verify that all connections are working.
- Configure the AutoView 3050/3100/3200 switch’s IP address using the OSCAR graphical user interface.
- Use the On-board Web Interface (OBWI) to configure the AutoView 3050/3100/3200 switch.
- Make the appropriate mouse setting adjustments.
Figure 2.1 illustrates a basic configuration for the AutoView 3100/3200 switch, using the AutoView 3100/3200 model for the example. Descriptions follow in Table 2.1.

Figure 2.1: Basic AutoView 3100/3200 Switch Configuration (AutoView 3050 Switch Not Shown)
Chapter 2: Installation

Getting started

Before installing your AutoView 3050/3100/3200 switch, refer to the following lists to ensure you have all items that shipped with the switch, as well as other items necessary for proper installation.

**NOTE:** While it is possible to use two AutoView 3050/3100/3200 switches in a cascaded configuration, it can cause function conflicts and limit the advanced features of the switch. As a result, Avocent does not recommend this configuration.

### Supplied with the AutoView 3050/3100/3200 switch

- Local country power cord
- Rack mounting brackets
- Rack Mounting Bracket Quick Installation Guide
- AutoView 3050/3100/3200 Switch Quick Installation Guide
- One null modem cable

### Additional items needed

- One IQ module per target server or serial IQ module per serial device
- One UTP patch cable per IQ module (4-pair UTP, up to 30 meters)
- UTP patch cable(s) for network connectivity (4-pair UTP, up to 30 meters)

### Setting up your network

The AutoView 3050/3100/3200 switching system uses IP addresses to uniquely identify the switch and the target devices. The AutoView 3050/3100/3200 switch family supports both Dynamic Host Configuration Protocol (DHCP) and static IP addressing. Avocent recommends that IP addresses be reserved for each switch and that they remain static while the switches are connected to the network.

Rack Mounting an AutoView 3050/3100/3200 Switch

A rack mounting kit is supplied with each AutoView 3050/3100/3200 switch. You may either place the AutoView 3050/3100/3200 switch on the rack shelf or mount the switch directly into an Electronic Industries Alliance (EIA) standard rack.

Most AutoView 3050/3100/3200 switches may be rack mounted in a 1U configuration. The AutoView 3050/3100/3200 switch family does not support a 0U configuration.

Rack mounting safety considerations

- Rack Loading - Overloading or uneven loading of racks may result in shelf or rack failure, causing damage to equipment and possible personal injury. Stabilize racks in a permanent location before loading begins. Mount components beginning at the bottom of the rack, then work to the top. Do not exceed your rack load rating.

- Power Considerations - Connect only to the power source specified on the unit. When multiple electrical components are installed in a rack, ensure that the total component power ratings do not exceed circuit capabilities. Overloaded power sources and extension cords present fire and shock hazards.

- Elevated Ambient Temperature: If installed in a closed rack assembly, the operating temperature of the rack environment may be greater than room ambient. Use care not to exceed the rated maximum ambient temperature of the switch.

- Reduced Air Flow: Install the equipment in the rack so that the amount of airflow required for safe operation of the equipment is not compromised.

- Reliable Earthing: Maintain reliable earthing of rack mounted equipment. Pay particular attention to supply connections other than direct connections to the branch circuit (for example, use of power strips).

To install the rack mounting bracket:

1. Remove the two rack mounting screws from each side of the AutoView 3050/3100/3200 switch.

2. Place the rack mounting brackets next to the switch as illustrated in Figure 2.2.

3. Insert the screws supplied with the rack mounting kit through the holes of the brackets and into the AutoView 3050/3100/3200 switch. Tighten the screws securely.

4. Install the AutoView 3050/3100/3200 switch into the rack using the method of the rack manufacturer.
Connecting the AutoView 3050/3100/3200 Switch Hardware

To connect and turn on your AutoView 3050/3100/3200 switch:

1. Turn off the target device(s) that will be part of your AutoView switching system. Locate the power cord that came with the AutoView 3050/3100/3200 switch and plug the appropriate end into the power socket on the rear of the switch. Plug the other end into an appropriate AC wall outlet.

   **NOTE:** To avoid potential video and/or keyboard problems when using Avocent products: If the building has 3-phase AC power, ensure that the computer and monitor are on the same phase. For best results, they should be on the same circuit.

   **WARNING:** To reduce the risk of electric shock or damage to your equipment:
   - Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
   - Plug the power cord into a grounded (earthed) outlet that is easily accessible at all times.
   - Disconnect the power from the switch by unplugging the power cord from either the electrical outlet or the appliance.
   - The AC inlet is the main power disconnect.

2. Disconnect the power from the switch by unplugging the power cord from either the electrical outlet or the appliance.

3. Plug your VGA monitor and either PS/2 or USB keyboard and mouse cables into the appropriately labeled ports. You must install both a keyboard and mouse on the local ports or the keyboard will not initialize properly.

4. Plug a compatible IQ module into the appropriate ports on the back of the target server.

5. Choose an available numbered port on the rear of your AutoView 3050/3100/3200 switch. Plug one end of a UTP patch cable (4-pair, up to 45 meters) into the selected port and plug the other end into the RJ-45 connector of the IQ module. Repeat this procedure for all servers that are to be connected to the AutoView 3050/3100/3200 switch.
6. Plug a UTP patch cable from your Ethernet network into the LAN port on the back of your AutoView 3050/3100/3200 switch. Network users will access the AutoView 3050/3100/3200 switch through this port.

7. Turn on each target device and then turn on the AutoView 3050/3100/3200 switch. After about one minute, the switch completes initialization and displays the OSCAR graphical user interface Free tag on the local port monitor.

8. Point your web browser to the default IP address https://192.168.1.1 to access the device.

9. Log in to the OBWI and, using the top menu bar, select Application-Appliance Settings-Network. Enter the appropriate addressing information for your network.

   - or -

   Press Print Screen to activate the OSCAR menu. Click Setup-Network-Set IP Address and enter the appropriate addressing information for your network.

To connect a serial IQ module to a serial device:

1. Attach the serial IQ module 9-pin serial connector to the serial port of the device to be connected to your AutoView 3050/3100/3200 switch.

2. Attach one end of the UTP patch cable to the RJ-45 connector on the IQ module. Connect the other end of the UTP patch cable to the desired port on the back of your AutoView 3050/3100/3200 switch.

   NOTE: The serial IQ module is a DCE device and only supports VT100 terminal emulation.

3. Connect the power supply to the power connector on your serial IQ module. The cable expander can be used to turn on to four serial IQ modules from a single power supply.

4. Connect the serial IQ module power supply to a grounded AC wall outlet. Turn on your serial device. See the Using Serial IQ Modules on page 77 for more information.

Configuring the AutoView 3050/3100/3200 Switch

Once all mechanical connections have been made, you will need to configure the switch for use in the overall switching system. See Chapter 6 for detailed instructions.

Setting up the built-in web server

You can access the AutoView 3050/3100/3200 switch via an embedded web server that handles most day-to-day switching tasks. Before using the web server to access the switch, first specify an IP address through the 10101 port on the back panel of the switch or through the OSCAR interface. See Chapter 4 for detailed instructions on using the OBWI for switching.
Connecting to the OBWI through a firewall

For AutoView 3050/3100/3200 switch installations that use the OBWI for access, four ports must be opened in a firewall if outside access is desired.

</table>

In a typical configuration, as shown in Figure 2.3, the user’s computer is located outside of the firewall, and the AutoView 3050/3100/3200 switch resides inside the firewall.

![Figure 2.3: Typical AutoView 3050/3100/3200 Switch Firewall Configuration](image)

Table 2.3: Descriptions for Figure 2.3

<tbody>
<tr>
<td>1</td>
<td>AutoView 3050/3100/3200 Switch</td>
</tr>
<tr>
<td>2</td>
<td>Firewall</td>
</tr>
</tbody>
</table>
To configure the firewall:
To access the AutoView 3050/3100/3200 switch from outside a firewall, configure your firewall to forward ports 80, 443, 2068 and 8192 from its external interface to the KVM switch through the firewall’s internal interface. Consult the manual for your firewall for specific port forwarding instructions.

To connect to the AutoView 3050/3100/3200 switch OBWI:
Open a web browser and enter the external IP address of the firewall. The AutoView 3050/3100/3200 Explorer window will open and prompt you to login.

Verifying the Connections

AutoView 3050/3100/3200 switch
The front panel of the AutoView 3050/3100/3200 switch features LEDs indicating the Ethernet connection for LAN, as well as LEDs that indicate the target device status for each port.

Ethernet connection LEDs
- The green LED, labeled *Link*, illuminates when a valid connection to the network is established at the maximum supported rate and blinks when there is activity on the port.
- The amber LED illuminates when you are communicating at a slower rate when using an Ethernet connection.
- If neither LED is illuminated, connection speed is at a rate of 10 Mbps.

Target device status LEDs
- A green LED illuminates when the attached target device has power.
- An amber LED illuminates when that port is selected.
- The LEDs blink during a firmware upgrade.

IQ and serial IQ modules
Typically, IQ modules feature two green LEDs: a *POWER* LED and a *STATUS* LED.
- The *POWER* LED indicates that the attached module is turned on.
• The STATUS LED indicates that a valid selection has been made to an AutoView 3050/3100/3200 switch.

The serial IQ module prevents a serial break from the attached device if the module loses power. However, a user can generate a serial break with the attached device by pressing Alt-B after accessing the Terminal Applications menu.

**Adjusting Mouse Settings on Target Devices**

Before a computer connected to the AutoView 3050/3100/3200 switch can be used for remote user control, you must set the target mouse speed and turn off acceleration. For machines running Microsoft® Windows® (Windows NT®, 2000, XP, Server 2003), use the default PS/2 mouse driver.

To ensure that the local mouse movement and remote cursor display remain in sync, mouse acceleration must be set to “none” for all user accounts accessing a remote system through a KVM switch. Mouse acceleration must also be set to “none” on every remote system. Special cursors should not be used and cursor visibility options, such as pointer trails, Ctrl key cursor location animations, cursor shadowing and cursor hiding, should also be turned off.
Local Port Operation

The AutoView 3050/3100/3200 switch includes a local port on the back. This port enables you to connect a keyboard, monitor and mouse to the switch for direct access. The AutoView 3050/3100/3200 switches include the OSCAR graphical user interface for configuring your system and selecting target devices.

Basic Operations

Viewing and selecting ports and servers

Use the Main dialog box to view, configure and control target devices in the AutoView 3050/3100/3200 switching system. You may view the target devices by name, port or by the unique Electronic ID (EID) embedded in each IQ module. You will see an OSCAR interface-generated port list by default when you first launch the OSCAR interface. The Port column indicates the port to which a target device is connected.

Selecting a target device

Use the Main dialog box to select a target device. When you select a target device, the AutoView 3050/3100/3200 switch reconfigures the keyboard and mouse to the settings for the selected target device.

To select a target device:

Double-click the target device name, EID or port number.

-or-

If the display order of your list is by port (the Port button is depressed), type the port number and press Enter.

-or-

If the display order of your list is by name or EID (the Name or EID button is depressed), type the first few letters of the name of the target device or the EID number to establish it as unique and press Enter.
NOTE: If OSCAR Authentication has been enabled, an “Authenticating” screen will appear after you select a target device because the AutoView 3050/3100/3200 switch is confirming your access to that target device. If you are denied access to the target device, a message will appear saying that you can not view that particular target device.

To select the previous target device:
Press Print Screen and then Backspace. This key combination toggles you between the previous and current connections.

To disconnect from a target device:
Press Print Screen and then Alt+0 (zero). This leaves the user in a free state, with no target device selected. The status flag on your desktop displays Free.

Soft switching
Soft switching is the ability to switch target devices using a hotkey sequence. You can soft switch to a target device by pressing Print Screen and then typing the first few characters of its name or number. If you have set a Screen Delay Time and you press the key sequences before that time has elapsed, the OSCAR interface will not display.

To soft switch to a target device:
Press Print Screen. If the display order of the Main dialog is by port (the Port button is depressed), type the port number and press Enter.

-or-
If the display order of the Main dialog is by name (the Name button is depressed), type the first few letters of the name of the target device to establish it as unique and press Enter.

To switch back to the previous target device, press Print Screen then Backspace.

Viewing the status of your AutoView 3050/3100/3200 switching system
The status of target devices in your system is indicated in the far right columns of the Main dialog box. The following table describes the status symbols.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![green circle]</td>
<td>(green circle) Server connected, powered up and the IQ module is online.</td>
</tr>
<tr>
<td>![cross]</td>
<td>Connected target device is powered down or is not operating properly, and the IQ module is offline.</td>
</tr>
<tr>
<td>![circle]</td>
<td>Connected switch is online.</td>
</tr>
<tr>
<td>![tick]</td>
<td>Connected switch is offline or not operating properly.</td>
</tr>
</tbody>
</table>
Navigating the OSCAR interface

This table describes how to navigate the OSCAR interface using the keyboard and mouse.

Table 3.2: OSCAR Interface Navigation Basics

<td>Print Screen, Backspace</td>
<td>Toggles back to previous selection.</td>
</tr>
</tbody>
</table>
Main Dialog Box Functions

To access the OSCAR interface Main dialog box:

Press **Print Screen** to launch the OSCAR interface. The Main dialog box will appear as shown in Figure 3.1.

**NOTE:** If OSCAR Authentication has been enabled, you will be prompted to enter a username and password before you can launch the OSCAR interface.

---

Managing a KVM session

Click *Log Out* to disconnect the KVM and user sessions.

-or-

Click *Clear* to clear all offline IQ modules.

-or-

Click *Disconnect* to disconnect a KVM session.

**Setup Dialog Box Functions**

You can configure your AutoView 3050/3100/3200 switching system from the Setup dialog box within the OSCAR interface. Select the *Names* button when initially setting up your AutoView 3050/3100/3200 switching system to identify target devices by unique names. Select the other setup features to manage routine tasks for your target devices from the OSCAR interface menu.
Table 3.4 outlines the function accessed using each of the buttons in the Setup dialog box as shown in Figure 3.2.

**Table 3.4: Setup Features to Configure the OSCAR Interface**

<table>

</tbody>
</table>

**To access the OSCAR interface Setup dialog box:**

1. Press **Print Screen** to launch the OSCAR interface. The Main dialog box appears.
2. Click **Setup** to open the Setup dialog box shown in Figure 3.2.

![Avocent Setup]

*Figure 3.2: OSCAR Interface Setup Dialog Box*
Changing the display behavior

Use the Menu dialog box to change the display order of target devices, change how the OSCAR interface is invoked or set a Screen Delay Time for the OSCAR interface. This setting alters how target devices will display in several dialog boxes, including Main, Devices and Broadcast.

To access the OSCAR interface Menu dialog box:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Setup - Menu in the Main dialog box to open the Menu dialog box shown in Figure 3.3.

![Figure 3.3: OSCAR Interface Menu Dialog Box](image)

To choose the display order of target devices:

1. Select Name to display target devices alphabetically by name.
   -or-
   Select EID to display target devices numerically by EID number.
   -or-
   Select Port to display target devices numerically by port number.
2. Click OK.

Depending on the display method selected, the corresponding button will be depressed in the Main dialog box.

To change how the OSCAR interface is invoked:

1. Select the checkbox next to one of the listed methods.
2. Click OK.

To set a Screen Delay Time for the OSCAR interface:

1. Type in the number of seconds (0-9) to delay the OSCAR Interface display after you press Print Screen. Entering 0 will instantly launch the OSCAR interface with no delay.
2. Click OK.
Setting a Screen Delay Time enables you to complete a soft switch without the OSCAR interface displaying. To perform a soft switch, see the *Soft switching* on page 14.

**Controlling the status flag**

The status flag displays on your desktop and shows the name or EID number of the selected target device or the status of the selected port. Use the Flag dialog box to configure the flag to display by target device name or EID number, or to change the flag color, opacity, display time and location on the desktop. Table 3.5 describes each status flag.

**Table 3.5: OSCAR Interface Status Flags**

<table>
<thead>
<tr>
<th>Flag</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Darrell</td>
<td>Flag type by name</td>
</tr>
<tr>
<td>520255-70F344</td>
<td>Flag type by EID number</td>
</tr>
<tr>
<td>Free</td>
<td>Flag indicating that the user has been disconnected from all systems</td>
</tr>
<tr>
<td>Darrell</td>
<td>Flag indicating that Broadcast mode is enabled</td>
</tr>
</tbody>
</table>

To access the OSCAR interface Flag dialog box:

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Setup - Flag** to open the Flag dialog box shown in Figure 3.4.

![Figure 3.4: OSCAR Interface Flag Dialog Box](image)

To determine how the status flag is displayed:

1. Select *Name* or *EID* to determine what information will be displayed.
2. Select *Displayed* to activate the flag display. After a switch, the flag will remain on the screen until the user switches to another device. Selecting *Timed* will cause the flag to display for five seconds when a switch is made and then disappear.

3. Select a flag color under Display Color. The following flag colors are available:
   - *Flag 1* - Gray flag with black text
   - *Flag 2* - White flag with red text
   - *Flag 3* - White flag with blue text
   - *Flag 4* - White flag with violet text

4. In Display Mode, select *Opaque* for a solid color flag.
   - or -
   Select *Transparent* to see the desktop through the flag.

5. To position the status flag on the desktop:
   a. Click *Set Position* to gain access to the Position Flag screen shown in Figure 3.5.

   ![Set Position](image)

   **Figure 3.5: Position Flag**
   - b. Left-click on the title bar and drag to the desired location.
   - c. Right-click to return to the Flag dialog box.

   **NOTE:** Changes made to the flag position are not saved until you click *OK* in the Flag dialog box.

6. Click *OK* to save settings.
   - or -
   Click *X* to exit without saving changes.

**Selecting target devices for broadcasting**

The local user can simultaneously control multiple target devices in a system to ensure that all selected target devices receive identical input. You can choose to broadcast keystrokes and/or mouse movements independently.

**NOTE:** You can broadcast to as many as eight target devices at a time (one target device per port).

**To access the OSCAR interface Broadcast dialog box:**

1. If the OSCAR interface is not open, press *Print Screen* to open the Main dialog box.
2. Click *Setup - Broadcast* to open the Broadcast dialog box shown in Figure 3.6.
NOTE: Broadcasting Keystrokes - The keyboard state must be identical for all target devices receiving a broadcast to interpret keystrokes identically. Specifically, the Caps Lock and Num Lock modes must be the same on all keyboards. While the switch attempts to send keystrokes to the selected target devices simultaneously, some target devices may inhibit and thereby delay the transmission.

Broadcasting Mouse Movements - For the mouse to work accurately, all systems must have identical mouse drivers, desktops (such as identically placed icons) and video resolutions. In addition, the mouse must be in exactly the same place on all screens. Because these conditions are extremely difficult to achieve, broadcasting mouse movements to multiple systems may have unpredictable results.

To select the target devices for broadcasting:

1. From the Broadcast dialog box, select the mouse and/or keyboard checkboxes for the target devices that are to receive the Broadcast commands.
   -or-
   Press the Up or Down Arrow keys to move the cursor to the target device. Then press Alt+K to select the keyboard checkbox and/or Alt+M to select the mouse checkbox. Repeat for additional target devices.

2. Click OK to save the settings and return to the Setup dialog box. Click X or press Escape to return to the Main dialog box.

For information on starting and stopping broadcasting, see Enabling or disabling Broadcasting on page 32.

Selecting target devices for Scan mode

In Scan mode, the AutoView 3050/3100/3200 switch automatically scans from port to port (target device to target device). You can scan multiple target devices, specifying which devices to scan and the number of seconds that each will display. The scanning order is determined by placement of the target device in the list. The list is always shown in scanning order. You can, however, choose to display the target device’s name or EID number by pressing the appropriate button.
To add target devices to the Scan list:

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Setup - Scan** to open the Scan dialog box shown in Figure 3.7.

![Figure 3.7: OSCAR Interface Scan Dialog Box](image)

3. Determine the order within the list to add the target device. If there are no target devices in the Scan list, your cursor will appear in a blank line at the top of the list.
   - or -
   To add a target device to the end of the list, place your cursor in the last target device entry and press the **Down Arrow** key.
   - or -
   To add a target device within an existing list, place your cursor in the line below where you want to insert a new target device and press **Insert**.

4. Type the first few characters of a target device name or port number to scan. The first matching target device will appear in the line.
   - or -
   Press the following keyboard commands in the Name, Port or Time column to move through the list of target devices available to scan.
   a. Press **Alt+Down Arrow** to move the cursor down through the list of target devices.
   b. Press **Alt+Up Arrow** to move the cursor up through the list of target devices.
   c. Press **Alt+Home** to move the cursor to the first target device in the list.
   d. Press **Alt+End** to move the cursor to the last target device in the list.

5. In the Time column, type the number of seconds (from 3-255) of desired time before the scan moves to the next target device in the sequence.
6. Move the cursor to the next line or press **Down Arrow** and repeat steps 2-5 for each of the remaining target devices to be included in the scan pattern.

7. Click **OK** to save your settings.

**To remove a target device from the Scan list:**

1. In the Scan dialog box, click the target device to be removed.
2. Press **Delete**.
   - or -
   Press **Shift+Delete** to remove the selected target device and all entries below it.
3. Click **OK** to save your settings.

For more on starting and stopping scanning, see *Enabling or disabling Scan mode* on page 33.

**Setting local port Screen Saver options**

You can use the Screen Saver dialog box to manage the screen saver inactivity time and test the Screen Saver mode on the local port. If OSCAR Authentication has been enabled, after the specified Inactivity Time elapses, the local port locks and remains locked until you press any key or move the mouse. You will then need to log in and reselect a target device to continue.

**To access the OSCAR interface Screen Saver dialog box:**

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Setup - Screen Saver** to open the Screen Saver dialog box shown in Figure 3.8.

![Screen Saver Dialog Box](image)

**Figure 3.8: OSCAR Interface Screen Saver Dialog Box**

**To set the Screen Saver options:**

1. Type the number of minutes for Inactivity Time (from 1-90) to delay activation of password protection and the screen saver feature.
2. For Mode, select **Energy** if your monitor is ENERGY STAR® compliant; otherwise select **Screen**.
CAUTION: Monitor damage can result from the use of Energy mode with monitors not compliant with ENERGY STAR®.

3. (Optional) Click Test to activate the screen saver test, which lasts 10 seconds, then returns you to the Security dialog box.

4. Click OK to save your settings.

To exit Screen Saver mode and log in to the local port:

1. Press any key or move the mouse.

2. If OSCAR Authentication has been enabled, you will see a login screen. Enter your username and password and then click OK.

3. The Main OSCAR interface dialog box will appear. You may select an available target device.

To immediately activate the screen saver:

Press Print Screen, then Pause.

This command sequence works only when the user is connected to a target device.

Setting the keyboard country code

NOTE: Using a keyboard code that supports a language different from that of your AutoView 3050/3100/3200 switch firmware will cause incorrect keyboard mapping.

Sun servers may use keyboard mappings for non-US keyboards. By default, the AutoView 3050/3100/3200 switch sends the US keyboard country code to Sun and USB modules attached to target devices, and the code is applied to the target devices when they are powered up or rebooted. Codes are then stored in the IQ module.

Issues may arise when you use the US keyboard country code with a keyboard of another country. For example, the Z key on a US keyboard is in the same location as the Y key on a German keyboard. Sun servers will interpret pressing the Y key on a German keyboard as pressing the Z key when the US keyboard country code is used.

The Keyboard dialog box enables you to send a different keyboard country code than the default US setting. The specified country code is sent to all target devices attached to the AutoView 3050/3100/3200 switches when they are powered up or rebooted, and the new code is stored in the IQ module.

NOTE: If an IQ module is moved to a different target device, the keyboard country code will need to be reset.

See Sun Advanced Key Emulation on page 85 for information on emulating certain Sun keys using a PS/2 keyboard and special considerations for Japanese and Korean Sun USB keyboards.

NOTE: Only local users can view or change keyboard country code settings.
To set the keyboard country code for Sun servers:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Setup - Keyboard to open the Keyboard dialog box shown in Figure 3.9.

![Keyboard Configuration](image)

Figure 3.9: OSCAR Interface Keyboard Dialog Box

3. Select a country code and click OK to save your settings.
4. Reboot the Sun servers. After rebooting, each Sun server will request the country code setting stored in the IQ module.

**NOTE:** If you wish to reboot the target devices by power-cycling them, you must wait 90 seconds before rebooting. A soft reboot may be performed without waiting 90 seconds.

### Configuring network settings

Use the Network dialog box to set the IP address, select an Ethernet mode or enable or disable the Ping Response feature.

**NOTE:** Only appliance administrators can make changes to Network dialog box settings. Other users can still access this dialog box, as well as the IP Setup dialog box, to view information, but they will not be able to make any changes.

To set the Ethernet Mode:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Setup - Network to open the Network dialog box shown in Figure 3.10.
3. Select one of the available options in the Ethernet Mode section.
4. Click OK.

**NOTE:** You must reboot if you change the Ethernet mode. After you change the setting and click OK, the following message appears: Changing the Ethernet mode requires a reboot of the appliance. Do you want to reboot now, or cancel the changes? Warning: Rebooting will disconnect ALL users! You can then reboot by clicking Reboot, or cancel the changes by clicking Cancel.

**To enable or disable the Ping Response:**

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Setup - Network** to open the Network dialog box.
3. Select either **Enabled** or **Disabled** in the Ping Response section.
4. Click **OK**.

For more information on pinging an IP address, see **To send a ping request:** on page 37.

**Configuring the IP address**

The IP Setup dialog box allows users to choose either IPv4 mode or IPv6 mode. The default is IPv4. You can also specify an IP address for the switch to use.

**To configure the IP address:**

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Setup - Network** to open the Network dialog box, then click **Set IP Address...** to open the IP Setup dialog box shown in Figure 3.11.
3. Select either IPv4 or IPv6.
4. Either select or deselect the DHCP checkbox.

**NOTE:** If you select the DHCP checkbox, any information that you enter in the IP Address, Prefix/Netmask and Gateway fields will be ignored.

5. If you deselected DHCP in step 4, type the desired information in the IP Address, Prefix/Netmask and Gateway fields.
6. Click *OK*.

### Assigning device types

**To access the OSCAR interface Devices dialog box:**

1. If the OSCAR interface is not open, press *Print Screen* to open the Main dialog box.
2. Click *Setup - Devices* to open the Devices dialog box shown in Figure 3.12.

**NOTE:** The Modify button is available only if a configurable switch is selected.
When the AutoView 3050/3100/3200 switch discovers a cascaded switch, the numbering format changes from an AutoView 3050/3100/3200 port only to [AutoView 3050/3100/3200 port]-[switch port] to accommodate each target device under that switch.

For example, if a switch is connected to AutoView 3050/3100/3200 port 6, each target device connected to it would be numbered sequentially. The target device using AutoView 3050/3100/3200 port 6, switch port 1, would be 06-01, the target device using AutoView 3050/3100/3200 port 6, switch port 2, would be 06-02, and so on.

**To assign a device type:**

1. In the Devices dialog box, select the desired port number.
2. Click *Modify* to open the Device Modify dialog box shown in Figure 3.13.

3. Choose the number of ports supported by your switch and click *OK*.
4. Repeat steps 1-3 for each port requiring a device type to be assigned.
5. Click OK in the Devices dialog box to save settings.

**NOTE:** Changes made in the Device Modify dialog box are not saved until you click OK in the dialog box.

### Assigning target device names

Use the Names dialog box to identify target devices by name rather than by port number. The Names list is always sorted by port order. You can toggle between displaying the name or the EID number of each IQ module, so even if you move the target device to another port, the name and configuration will be recognized by the switch.

**NOTE:** When it is initially connected, a target device will not appear in the Names list until it is powered up. Once an initial connection has been made, it will appear in the Names list even when powered down.

To access the OSCAR interface Names dialog box:

1. If the OSCAR interface is not open, press **Print Screen**. The Main dialog box appears.
2. Click **Setup - Names** to open the Names dialog box shown in Figure 3.14.

![Figure 3.14: OSCAR Interface Names Dialog Box](image)

**NOTE:** If new IQ modules are discovered by the AutoView 3050/3100/3200 switch, the on-screen list will be automatically updated. The mouse cursor will change into an hourglass during the update. No mouse or keyboard input will be accepted until the list update is complete.

To assign names to target devices:

1. In the Names dialog box, select a target device name or port number and click **Modify** to open the Name Modify dialog box shown in Figure 3.15.
2. Type a name in the New Name box. Names of target devices may contain all printable characters.

3. Click OK to transfer the new name to the Names dialog box. Your selection is not saved until you click OK in the Names dialog box.

4. Repeat steps 1-3 for each target device in the system.

5. Click OK in the Names dialog box to save your changes.

   -or-
   Click X or press Escape to exit the dialog box without saving changes.

**NOTE:** If an IQ module has not been assigned a name, the EID is used as the default name.

---

**To list target devices alphabetically by name:**

Press **Alt+N** or click **Name** in the Main dialog box.

---

### Commands Dialog Box Functions

From the OSCAR interface Commands dialog box, you can manage your AutoView 3050/3100/3200 switching system and user connections, enable the Scan and Broadcast modes and update your firmware.

<table>
<thead>
<tr>
<th>Features</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Broadcast</strong></td>
<td>Begin broadcasting to your target devices. Configure a target device list for broadcasting under the Setup dialog box.</td>
</tr>
<tr>
<td><strong>Enable</strong></td>
<td>Begin scanning your target devices. Set up a target device list for scanning in the Setup dialog box.</td>
</tr>
</tbody>
</table>

---
To access the OSCAR interface Commands dialog box:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands to open the Commands dialog box shown in Figure 3.16.

### Enabling or disabling Broadcasting

#### To turn Broadcasting on:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands to open the Commands dialog box.
3. Select the Broadcast Enable checkbox to activate Broadcasting.
4. From the user station, type the information and perform the mouse movements you wish to broadcast.

#### To turn Broadcasting off:

From the Commands dialog box, clear the Broadcast Enable checkbox.

---

**Table 3.6: Commands to Manage Routine Tasks for Your Target Devices (Continued)**

<table>
<thead>
<tr>
<th>Features</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Status</td>
<td>View and disconnect users.</td>
</tr>
<tr>
<td>Display Versions</td>
<td>View version information for the AutoView 3050/3100/3200 switch as well as view and upgrade firmware for individual IQ modules.</td>
</tr>
<tr>
<td>Reset PS/2</td>
<td>Re-establish operation of PS/2 keyboard and mouse.</td>
</tr>
<tr>
<td>Network Ping</td>
<td>Ping a specific IP address.</td>
</tr>
</tbody>
</table>
Enabling or disabling Scan mode

To start the Scan mode:
1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands to open the Commands dialog box.
3. Select Scan Enable in the Commands dialog box.
4. Click X to close the Commands dialog box.

**NOTE:** Scanning will begin as soon as the Scan Enable button is selected.

To cancel Scan mode:
Select a target device if the OSCAR interface is open.
- or -
Move the mouse or press any key on the keyboard if the OSCAR interface is not open. Scanning will stop at the currently selected target device.
- or -
From the Commands dialog box, deselect the Scan Enable checkbox.

Viewing and disconnecting user connections

You can view and disconnect users through the User Status dialog box. The username (U) will always be displayed; however, you can display either the target device name or EID number to which a user is connected. If there is no user currently connected to a channel, the user field will be blank and the Server Name field will display Free.

To view current user connections:
1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands - User Status to open the User Status dialog box shown in Figure 3.17.
To disconnect a user:

1. If the OSCAR interface is not open, press **Print Screen** to open the Main dialog box.
2. Click **Commands - User Status** to open the User Status dialog box shown in Figure 3.17.
3. Click the letter corresponding to the user to disconnect. The Disconnect dialog box will appear as shown in Figure 3.18.
4. Click **OK** to disconnect the user and return to the User Status dialog box.
   - or -
   Click X or press **Escape** to exit the dialog box without disconnecting a user.

**NOTE:** If the User Status list has changed since last displayed, the mouse cursor will turn into an hourglass as the list is automatically updated. No mouse or keyboard input will be accepted until the list update is complete.
Displaying version information

The OSCAR interface enables you to display the version number of the switch firmware and any auxiliary devices connected to the switch. This information facilitates system troubleshooting and support. For optimum performance, keep your firmware current.

**To display version information:**

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands - Display Versions to open the Version dialog box shown in Figure 3.19.

![Figure 3.19: OSCAR Interface Version Dialog Box](image)

3. To view individual AVRIQ module version information, click AVRIQ to open the AVRIQ Selection dialog box shown in Figure 3.20.

![Figure 3.20: AVRIQ Selection Dialog Box](image)
4. Select a AVRIQ module to view and click the Version button. The AVRIQ Version dialog box shown in Figure 3.21 appears.

For more information on loading firmware, refer to Flash Upgrades on page 75.

![AVRIQ Version Dialog Box](image)

Figure 3.21: AVRIQ Version Dialog Box

5. Click X to close the AVRIQ Version dialog box.

**Resetting your PS/2 keyboard and mouse**

*NOTE:* This function is for Microsoft Windows-based computers only. Resetting the PS/2 on a target device running any other operating system may require that you reboot that target device.

If your PS/2 keyboard or mouse locks up, you may be able to re-establish operation of these peripherals by issuing a Reset command. The Reset command sends a hot-plug sequence to the target device that causes the mouse and keyboard settings to be sent to the AutoView 3050/3100/3200 switch. With communication re-established between the target device and the AutoView 3050/3100/3200 switch, functionality is restored to the user.

**To reset the PS/2 mouse and keyboard values:**

1. If the OSCAR interface is not open, press *Print Screen* to open the Main dialog box.
2. Click *Commands - Reset PS/2*. A message box displays requesting that you confirm the reset.
3. In the message box, click *OK*.
   a. A message appears indicating that the mouse and keyboard have been reset.
   b. Click *OK* to close the message box.
   -or-
   Click X or press *Escape* to exit without sending a Reset command to the PS/2 mouse and keyboard.
Sending a ping request

To send a ping request:

1. If the OSCAR interface is not open, press Print Screen to open the Main dialog box.
2. Click Commands to open the Commands dialog box.
3. Click Network Ping to open the Ping dialog box shown in Figure 3.22.

![Figure 3.22: OSCAR Interface Ping Dialog Box](image)

4. Enter the IP address that you want to ping in the IP Address to ping field, then click Send Ping.
   
The result will be displayed in the Result box below the Send Ping button. The result will be one of the following:
   
   - Ping successful!
   - No response received.
   - Invalid IP address.
AutoView 3050/3100/3200 Switch OBWI

In addition to the OSCAR interface, AutoView 3050/3100/3200 switches equipped with the OBWI feature provide a built in interface to handle all basic KVM switching needs. The AutoView 3050/3100/3200 switch OBWI provides secure “point-and-click” web browser-based access to control any device attached to your AutoView 3050/3100/3200 switch.

Table 4.1 shows which operating systems and browsers the AutoView 3050/3100/3200 switch OBWI supports.

Table 4.1: OBWI Supported Operating Systems and Browsers

<table>

</tbody>
</table>

**NOTE:** Mac OS X requires Firefox 1.5 or later.
Avocent recommends that the browser be kept up-to-date with the latest version.

A Video Viewer window allows you to control the keyboard, monitor and mouse functions of individual target devices connected to the AutoView 3050/3100/3200 switch in real time. You may also use predefined global macros to perform actions within the Video Viewer window. For instructions on how to use the Video Viewer, see Chapter 5. Once the switch has been installed and configured as described in Chapter 2 and you have set the IP address, you are ready to begin regular operation.

Viewing and Selecting Ports and Servers

Before you can begin a KVM session, you must first log in to the AutoView switch OBWI.

To log in to the AutoView 3050/3100/3200 switch OBWI:

1. Launch a web browser.
2. In the address field of the browser, enter the IP address or host name assigned to the AutoView 3050/3100/3200 switch you wish to access. Use https://xxx.xx.xx.xx or https://hostname as the format.
3. When the browser makes contact with the switch, enter your username and password, then click Login. The AutoView 3050/3100/3200 Explorer window will appear.

**NOTE:** The default username is Admin with no password.

The AutoView 3050/3100/3200 Explorer Window

When a user has been logged in and authenticated, the Avocent AutoView 3050/3100/3200 Explorer window appears. From the AutoView 3050/3100/3200 Explorer window, users may view, access and manage their AutoView 3050/3100/3200 switch. The window may also be used to specify system settings and change profile settings.

Figure 4.1 shows the AutoView 3050/3100/3200 Explorer window areas and descriptions follow in Table 4.2.
Using the side navigation bar

You can use the side navigation bar to display windows in which you can specify settings or perform operations. Clicking on a link that does not contain an arrow will display its corresponding window.

### Table 4.2: Descriptions for Figure 4.1

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Top option bar: Use the top option bar to bookmark an AutoView 3050/3100/3200 switch OBWI window, refresh the display of an AutoView 3050/3100/3200 switch OBWI window, print a web page, log out of a software session or access the Avocent Technical Support help page. The name of the logged in user appears on the left side of the top option bar.</td>
</tr>
<tr>

<tr>
<td>3</td>
<td>Content area: Use the content area to display or make changes to the AutoView 3050/3100/3200 switch OBWI system.</td>
</tr>
</tbody>
</table>
Using the top option bar

Bookmarks a window

The AutoView 3050/3100/3200 Explorer window contains a bookmark icon and text in the top option bar. Bookmarking a window will add a link to the window in the Favorites drop-down menu. You may select the link at any time to quickly access the bookmarked window.

If you bookmark a window and information related to the window changes, this new information will appear in the window when you next display the bookmarked window.

If you click BOOKMARK or the bookmark icon after the AutoView 3050/3100/3200 switch OBWI session has timed out, the User Login window will open and you must log in again.

To bookmark a window:

1. In the top option bar, click BOOKMARK or the bookmark icon. The Add Favorite dialog box will appear.
2. If you wish, type a name for the window. You may also click the Create in button to create or specify a folder in which to place the window.
3. Click OK to close the Add Favorite dialog box.

Printing a window

All AutoView 3050/3100/3200 switch OBWI (OBWI) windows contain a print icon in the top option bar.

To print an AutoView 3050/3100/3200 switch OBWI window:

1. In the top option bar, click PRINT or the print icon. The Print dialog box will appear.
2. Specify the options you wish to use for printing the AutoView 3050/3100/3200 switch OBWI window.
3. Click Print to print the AutoView 3050/3100/3200 switch OBWI window and close the Print dialog box.

Refreshing a window

The AutoView 3050/3100/3200 Explorer window may be refreshed at any time by clicking REFRESH or the refresh icon in the top option bar.

Logging out

A user may log out at any time by clicking the logout icon in the top option bar.

Launching a KVM Session

NOTE: When in IPv4 mode, Java 1.5 or later is required. When in IPv6 mode, Java 1.6 or later is required. Currently, MAC operating systems only support Java 1.5, so users with MAC operating systems cannot yet operate in IPv6 mode.
Chapter 4: Web Interface Operations

To launch a KVM session from the AutoView 3050/3100/3200 Explorer window:

1. From the AutoView 3050/3100/3200 Explorer window, select Target Devices in the side navigation bar. A list of available devices will appear.
2. Click the KVM session link to the right of the target device that you wish to access. The Video Viewer will launch. For more information on the Video Viewer, see Chapter 5.

If the target device is currently in use, users attempting access will be given an opportunity to force a connection to the device if their preemption level is equal to or higher than the current user’s.

Users may also launch KVM sessions from the Unit Overview window.

To delete offline IQ modules:

1. If you wish to only list servers that are available and powered, click Appliance - Appliance Settings - Ports - IQ modules to activate the Appliance IQ modules window.
2. Click the Delete Offline button.

To disconnect an active KVM session (administrator only):

1. Click Appliance - Appliance Settings - Sessions - Active to display a list of active KVM sessions.
2. Select the checkbox to the left of the session you wish to disconnect and click the Disconnect button.

Managing the AutoView 3050/3100/3200 Switch OBWI

The AutoView 3050/3100/3200 switch OBWI provides several configuration options to tailor the switch to your specific application.

Upgrading IQ modules

The IQ module Flash upgrade feature allows you to update IQ modules with the latest firmware available. This update can be performed using the AutoView 3050/3100/3200 switch OBWI or the OSCAR interface.

After the Flash memory is reprogrammed with the upgrade, the AutoView 3050/3100/3200 switch performs a soft reset, which terminates all IQ module sessions. A target device experiencing an IQ module firmware update may not display, or may display as disconnected. The target device will appear normally when the Flash update is completed.

NOTE: Check www.avocent.com for firmware upgrade files.

NOTE: IQ modules are automatically updated when the AutoView 3050/3100/3200 switch is upgraded.

If issues occur during the normal upgrade process, IQ modules may also be force upgraded when needed.
To force upgrade the IQ module firmware using the AutoView 3050/3100/3200 switch on-board web interface:

1. From the side navigation bar, select Appliance - Appliance Settings - Ports - IQ modules.
2. Select the IQ modules that you wish to upgrade and click the Upgrade button.

**CAUTION:** Disconnecting an AutoView 3050/3100/3200 switch or IQ module or turning the user’s computer off and then on again during a firmware update may render it inoperable and require it to be returned to the factory for repair.

Managing local accounts

The AutoView 3050/3100/3200 switch OBWI provides local and login security through administrator-defined user accounts. By selecting Local Accounts on the side menu bar, administrators may add and delete users, define user preemption and access levels and change passwords.

Access levels

When a user account is added to the OBWI, the user may be assigned to any of the following access levels:

- Appliance administrators
- User administrators
- Users

**Table 4.3: Allowed Operations by Access Level**

<table>
<thead>
<tr>
<th>Operation</th>
<th>Access Level</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Appliance Administrator</td>
</tr>
<tr>
<td>Configure OBWI system-level settings</td>
<td>Yes</td>
</tr>
<tr>
<td>Configure access rights</td>
<td>Yes</td>
</tr>
<tr>
<td>Add, change and delete user accounts</td>
<td>Yes, for all access levels</td>
</tr>
<tr>
<td>Change your own password</td>
<td>Yes</td>
</tr>
<tr>
<td>Access target device</td>
<td>Yes, all target devices</td>
</tr>
</tbody>
</table>
To add a new user account (administrator only):
1. On the side menu bar, select Local Accounts. The current user list will be displayed.
2. Click the Add button.
3. Enter the name and password of the new user in the blanks provided.
4. Select the preemption and access levels for the new user.
5. Click the Save button to complete the process.

To delete a user account (administrator only):
1. On the side menu bar, select Local Accounts. The current user list will be displayed.
2. Click the box to the left of each account that you wish to delete, then click the Delete button.

To edit a user account (administrator or active user only):
1. On the side menu bar, select Local Accounts. The current user list will be displayed.
2. Click the name of the user you wish to edit. A user profile will appear.
3. Edit the user account as needed, then click Save.

Preemption levels

The preemption level of users determines whether they may disconnect another user’s serial or video (KVM) session with a target device.

AutoView 3050/3100/3200 switch OBWI administrators may specify the preemption level for user accounts when an account is created. The preemption level may be changed later.

Preemption levels range from 1-4, with 4 being the highest level. For example, a user with a preemption level of 4 may preempt other level 4 users, as well as those with a level 1, 2 or 3 setting.

To change the default preemption level (administrator only):
1. Click Appliance - Appliance Settings - Ports - OSCAR.
2. Use the drop-down menu to select the new level and click the Save button.

Rebooting the appliance

Periodically, such as after an upgrade, you may need to reboot the AutoView 3050/3100/3200 switch.

To reboot the AutoView 3050/3100/3200 switch remotely:
1. From the side navigation bar, select Appliance - Overview.
2. When the appliance overview window appears, click Tools - Reboot Appliance.
Managing Device Properties

Viewing and changing appliance configuration information

The AutoView 3050/3100/3200 switch can report most device properties directly through the AutoView switch web browser.

**NOTE:** Users can view all appliance information, but only administrators can change settings.

<table>
<thead>
<tr>
<th>To do this:</th>

</tr>
<tr>
<td>Change the modem time-out settings</td>
<td>Appliance - Appliance Settings - Ports - Modern</td>
</tr>
</tbody>
</table>
**Configuring LDAP**

LDAP is a vendor-independent protocol standard used for accessing, querying and updating a directory using TCP/IP. Based on the X.500 Directory Services model, LDAP is a global directory structure that supports strong security features including authentication, privacy and integrity.

If individual user accounts are stored on an LDAP-enabled directory service, such as Active Directory, you can use the directory service to authenticate users. The default values given for the LDAP search and query parameters are defined for use with Active Directory.

The settings made in the OBWI let you configure your authentication configuration parameters. The software sends the username, password and other information to the appliance, which then determines whether the user has permission to view or change configuration parameters for the appliance in the OBWI.

**NOTE:** Unless otherwise specified, the LDAP default values should be used unless Active Directory has been reconfigured. Modifying the default values may cause LDAP authentication server communication errors.

**LDAP Overview parameters**

On the LDAP Overview page in the OBWI, you can configure the LDAP authentication priority and the parameters that define LDAP server connection information.

**LDAP authentication priority**

In the LDAP Priority section of the LDAP Overview page, you can disable LDAP, or you can set the authentication priority by choosing whether local authentication or LDAP authentication should happen first.

To configure LDAP authentication priority parameters:

1. Select **Appliance - Appliance Settings - User Accounts - LDAP Accounts - Overview**.
2. Select either **LDAP Disabled**, **LDAP before Local** or **LDAP after Local** for the LDAP Priority.
3. Click **Save**.

**LDAP servers**

The Address fields specify the host names or IP addresses of the primary and secondary LDAP servers. The second LDAP server is optional.

The Port fields specify the User Datagram Protocol (UDP) port numbers that communicate with the LDAP servers. The default value is 389 for non-secure LDAP and 636 for secure LDAP (LDAPS). The default Port ID is automatically entered by the software when an access type is specified.

The Access Type radio buttons specify how a query is sent to each LDAP target device. When using LDAP, all usernames, passwords and other information sent between an appliance and LDAP server are sent as non-secure clear text. Use LDAPS for secure encrypted communication between an appliance and LDAP server.
To configure LDAP server parameters:

1. Select **Appliance - Appliance Settings - User Accounts - LDAP Accounts - Overview**.
2. Identify the primary and secondary server address, port and access type in the appropriate fields or radio buttons.
3. Click **Save**.

**LDAP Search parameters**

On the LDAP Search page, you can configure the parameters used when searching for LDAP directory service users.

Use the Search DN field to define an administrator-level user that the appliance uses to log into the directory service. Once the appliance is authenticated, the directory service grants it access to the directory to perform the user authentication queries specified on the Query page. The default values are `cn=Administrator, cn=Users, dc=yourDomainName and dc=com` and may be modified. For example, to define an administrator distinguished Name (DN) for `test.view.com`, type **cn=Administrator, cn=Users, dc=test, dc=view, and dc=com**. This Search DN field is a required field unless the directory service has been configured to enable anonymous search, which is not the default. Each Search DN value must be separated by a comma.
The Search Password field is used to authenticate the administrator or user specified in the Search DN field.

Use the Search Base field to define a starting point from which LDAP searches begin. The modifiable default values are dc=yourDomainName and dc=com. For example, to define a search base for test.com, type \texttt{dc=test, dc=com}. Each Search Base value must be separated by a comma.

The UID Mask field specifies the search criteria for User ID searches of LDAP target devices. The format should be in the form \texttt{<name>=<%1>}. The default value is \texttt{sAMAccountName=%1}, which is correct for use with Active Directory. This field is required for LDAP searches.

![Figure 4.3: LDAP Search Page in the OBWI](image)

**To configure LDAP search parameters:**

1. Select \textit{Appliance - Appliance Settings - User Accounts - LDAP Accounts - Search}.
2. Enter the appropriate information in the Search DN, Search Password, Search Base and UID Mask fields.
3. Click \textit{Save}.

**NOTE:** These options cannot be changed if the LDAP Priority is set to \textit{LDAP Disabled} on the Overview screen.
LDAP Query parameters

On the LDAP Query page, you can configure the parameters used when performing user authentication queries.

The appliance performs two different types of queries. Query Mode (Appliance) is used to authenticate administrators attempting to access the appliance itself. Query Mode (Target Device) is used to authenticate users that are attempting to access attached target devices. Additionally, each type of query has three modes that utilize certain types of information to determine whether or not a VCS user has access to an appliance or connected target devices. See Configuring LDAP on page 47 for detailed information on each mode.

You can configure the following settings on the LDAP Query page:

- **The Query Mode (Appliance) parameters** determine whether or not a user has access to the appliance.
- **The Query Mode (Target Device) parameters** determine whether or not a user has user access to target devices connected to an appliance. The user does not have access to the appliance.
- **The Group Container, Group Container Mask and Target Mask fields** are only used for group query modes and are required when performing an appliance or device query.
- **The Group Container field** specifies the organizational unit (ou) created in Active Directory by the administrator as the location for group objects. Group objects are Active Directory objects that can contain users, computers, contacts and other groups. Group Container is used when Query Mode is set to Group Attribute. Each group object, in turn, is assigned members to associate with a particular access level for member objects (people, appliances and target devices). The access level associated with a group is configured by setting the value of an attribute in the group object. For example, if the Notes property in the group object is used to implement the access control attribute, the Access Control Attribute field on the LDAP Query page should be set to info. Setting the Notes property to KVM User Admin causes the members of that group to have user administration access to the appliances and target devices that are also members of that same group.
- **The Notes property** is used to implement the access control attribute. The value of the Notes property, available in group and user objects shown in Active Directory Users and Computers (ADUC), is stored internally in the directory, in the value of the info attribute. ADUC is a Microsoft Management Console snap-in for configuring Active Directory. It is started by selecting Start - Programs - Administrative Tools - Active Directory Users and Computers. This tool is used to create, configure and delete objects such as users, computers and groups.
- **The Group Container Mask field** defines the object type of the Group Container, which is normally an organizational unit. The default value is “ou=%1”.
- **The Target Mask field** defines a search filter for the target device. The default value is “cn=%1”.
- **The Access Control Attribute field** specifies the name of the attribute that is used when the query modes are set to Attribute. The default value is info.
Figure 4.4: LDAP Query Page in the OBWI

To configure LDAP query parameters:

1. Select **Appliance - Appliance Settings - User Accounts - LDAP Accounts - Query**.
2. Select either **Basic**, **User Attribute** or **Group Attribute** for the Appliance Query Mode and the Target Device Query Mode.
3. Enter the appropriate information in the Group Container, Group Container Mask, Target Mask and Access Control Attribute fields.
4. Click **Save**.

**NOTE:** These options cannot be changed if the LDAP Priority is set to **LDAP Disabled** on the Overview screen.

**Appliance and Target Device Query Modes**

One of three different modes can each be used for Query Mode (Appliance) and Query Mode (Target Device):

- **Basic** – A username and password query for the user is made to the directory service. If they are verified, the user is given administrator access to the appliance and any attached target devices for Query Mode (Appliance), or to any selected target device for Query Mode (Target Device).
- **User Attribute** – A username, password and Access Control Attribute query for the appliance user is made to the directory service. The Access Control Attribute is read from the user object (the user account) in Active Directory.
If the KVM Appliance Admin value is found, the user is given appliance administrator access to the appliance and any attached target devices for Query Mode (Appliance), or to any selected target device for Query Mode (Target Device). If the KVM User Admin value is found, the user is given User administrator access to the appliance and attached target devices for Query Mode (Appliance), or to any selected target device for Query Mode (Target Device).

The following are examples showing how the KVM Appliance Admin and KVM User Admin attribute modes are defined in Active Directory for a user named John Smith, stored in the ADUC. You can access the ADUC by selecting Start - Programs - Administrative Tools - Active Directory Users and Computers.

![Figure 4.5: Active Directory - KVM User](image)
Group Attribute – A username, password and group query is made to the directory service for an appliance and attached target devices when using Query Mode (Appliance), or for a selected target device when using Query Mode (Target Device). If a group is found containing the user and the appliance name, the user is given access to the appliance or attached target devices, depending on the group contents, when using Query Mode (Appliance). If a group is found containing the user and target device IDs, the user is given access to the selected target device connected to the appliance when using Query Mode (Target Device).

Groups can be nested to a maximum of 16 levels in depth. Use nesting to create groups within other groups. For example, you may have a top-level group named Computers that contains a member named R&D, which is a group. The R&D group may contain a member named Domestic, which is a group, and so on.

The following is an example of groups defined in Active Directory.
Setting up Active Directory for Performing Queries

Before you can use any of the querying modes for units, you must first make changes to Active Directory so that the selected querying mode can assign the applicable authorization level for the user.

To set up group queries:

1. Log into Windows with administrator privileges.
2. Open Active Directory software.
3. Create an organizational unit to be used as a group container.
4. Create an object in Active Directory with a name identical to the switching system name for querying appliances (specified in the Appliance Overview screen of the OBWI), or identical to the attached target devices for querying target devices. The name must match exactly, including case.
5. The appliance names and target device names used for group queries are stored in the appliance. The appliance name specified in the Appliance Overview screen of the OBWI and target device names must identically match the object names in Active Directory. Each appliance name and target device name may be comprised of any combination of upper-case and lower-case letters (a-z, A-Z), digits (0-9) and hyphens (-). You cannot use spaces and periods (.) or create a name that consists entirely of digits. These are Active Directory constraints.
NOTE: The factory default name in earlier versions contains a space that must be removed by editing the switching system name in the Appliance Overview screen of the OBWI.

6. Create one or more groups under the group container organizational unit.
7. Add the user names and target device and appliance objects to the groups you created in step 5.
8. Specify the value of any attribute being used to implement the access control attribute. For example, if you are using info as the attribute in the Access Control Attribute field and using the Notes property in the group object to implement the access control attribute, the value of the Notes attribute in Active Directory may be set to one of the three available access levels (KVM User, KVM User Admin or KVM Appliance Admin) for the group object. The members of the group may then access the appliances and target devices at the specified access level.
CHAPTER 5

The Video Viewer

The Video Viewer Window

The Video Viewer is used to conduct a KVM session with the target devices attached to an AutoView 3050/3100/3200 switch using the OBWI. When you connect to a device using the Video Viewer, the target device desktop appears in a separate window containing both the local and the target device cursor. The Video Viewer window supports either a 3- or 5-button mouse.

The AutoView 3050/3100/3200 switch OBWI software uses a Java-based program to display the Video Viewer window. The AutoView 3050/3100/3200 switch on-board web interface automatically downloads and installs the Video Viewer the first time it is opened.

NOTE: When in IPv4 mode, Java 1.5 or later is required. When in IPv6 mode, Java 1.6 or later is required. Currently, MAC operating systems only support Java 1.5, so users with MAC operating systems cannot yet operate in IPv6 mode.

NOTE: The AutoView 3050/3100/3200 switch OBWI uses system memory to store and display images within Video Viewer windows. Each opened Video Viewer window requires additional system memory:
- An 8-bit color setting on the client PC requires 1.4 MB of memory per Video Viewer window.
- A 16-bit color setting requires 2.4 MB and a 32-bit color setting requires 6.8 MB.

Opening more than four simultaneous Video Viewer windows may affect system performance and is not recommended. If you attempt to open more Video Viewer windows than your system memory allows, you will receive an out-of-memory error and the requested Video Viewer window will not open.

If the device you are attempting to access is currently being viewed by another user, you will be prompted to preempt the other users if your preemption level is equal to or greater than theirs. An appliance administrator can also disconnect an active user via the Active Session page. For more information, see *To disconnect an active KVM session (administrator only)*: on page 43.
Launching a KVM Session

**NOTE:** When using a non-proxied connection, video performance over a slower network connection may be less than optimal. Since certain color settings (such as Grayscale) use less network bandwidth than others (such as Best Color), changing the color settings can increase video performance. For optimal video performance over a slower network connection, Avocent recommends a color setting such as Grayscale/Best Compression or Low Color/High Compression. See 1024 x 768 768 x 576 960 x 720 704 x 528 896 x 672 640 x 480 832 x 624 on page 62 for more information.

**NOTE:** If a user connects to a target device with a higher screen resolution than the local computer, the Video Viewer window will display a portion of the target device screen, with scroll bars for viewing the remainder of the screen. The user may view the entire screen by adjusting the resolution on the target device, the local computer or both.

**To launch a KVM session from the AutoView 3050/3100/3200 Explorer window:**

1. Click on a device listed on the Target Devices screen to open the unit overview window.
2. Click the **KVM Session** link to open the Video Viewer in a new window.

**Session time-out**

A remote session can time-out when no activity occurs in a Session window for a specified time. The session time-out value can be configured in the Appliance KVM Session Settings window. The specified time-out value will be used the next time the switch OBWI is accessed.

**To enable, disable or configure the session time-out:**

1. In the side menu, select **Unit Views - Appliance - Appliance Settings - Sessions - KVM Settings**.
2. Select the desired setting for the **Enable Activity Timeout** box.
3. If necessary, select the time limit for the inactivity time-out.

**Video Viewer Window Features**

Figure 5.1 shows the Video Viewer window areas. Descriptions follow in Table 5.1.
Chapter 5: The Video Viewer

Figure 5.1: Video Viewer Window (Normal Window Mode)

Table 5.1: Descriptions for Figure 5.1

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Title Bar: Displays the name of the server being viewed. When in Full Screen mode, the title bar disappears and the server name appears between the menu and toolbar.</td>
</tr>
<tr>
<td>2</td>
<td>Thumbtack: Locks the display of the menu and toolbar so that it is visible at all times.</td>
</tr>
<tr>
<td>3</td>
<td>Menu and toolbar: Enables you to access many of the features in the Video Viewer window. The menu and toolbar is in a show/hide state if the thumbtack has not been used. Place your cursor over the toolbar to display the menu and toolbar. Up to ten commands and/or macro group buttons can be displayed on the toolbar. By default, the Single Cursor Mode, Refresh, Automatic Video Adjust and Align Local Cursor buttons appear on the toolbar. For more information, see the Changing the toolbar on page 60 and the Using Macros on page 69.</td>
</tr>
<tr>
<td>4</td>
<td>Macro buttons: Commonly used keyboard sequences that can be sent to the target device.</td>
</tr>
<tr>
<td>5</td>
<td>Minimize button: Minimizes the display of the Video Viewer window into the task bar at the bottom of the local computer.</td>
</tr>
</tbody>
</table>
| 6      | Maximize button: Changes the window to Full Screen mode, which expands the accessed device desktop to fill the entire screen. Expanding the window causes the following to occur:  
  • The title bar disappears.  
  • The server name appears between the menu and toolbar.  
  • The Maximize button changes to a Normal Window Mode button and appears on the toolbar.  
  • Clicking the button toggles the Video Viewer window to Normal Window mode.  
  • The Close button appears on the toolbar. |
Changing the toolbar

You can choose the amount of elapsed time before the toolbar hides in the Video Viewer window when it is in show/hide state (that is, not locked in place by the thumbtack).

To specify a toolbar hide time:

1. Select **Tools - Session Options** from the Video Viewer window menu.
   -or-
   Click the **Session Options** button.
   
   The Session Options dialog box appears.
2. Click the **Toolbar** tab.
3. Use the arrow keys to specify the number of elapsed seconds prior to hiding the toolbar.
4. Click **OK** to save your changes and close the dialog box.

Setting the window size

**NOTE:** The View - Scaling command is not available if the Video Viewer window is in Full Screen mode or to non-primary users of a shared session.

When the AutoView 3050/3100/3200 switch OBWI is used for the first time, any open Video Viewer windows display at a resolution of 1024 x 768 until the user changes the value. Each Video Viewer window can be set to a different resolution.

The AutoView 3050/3100/3200 switch OBWI automatically adjusts the display if the window size changes during a session as long as autoscaling is enabled. If the target device resolution changes any time during a session, the display adjusts automatically.

To change the Video Viewer window resolution:

1. Select the **View - Scaling** command.
2. Click on the desired resolution.

Adjusting the view

Using menus or task buttons in the Video Viewer window, you can do the following:

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>Close button: Closes the Video Viewer window. <strong>NOTE:</strong> The Close button may not be present for all operating systems.</td>
</tr>
<tr>
<td>8</td>
<td>Accessed device desktop: Interacts with your device through this window.</td>
</tr>
<tr>
<td>9</td>
<td>Frame: Resizes the Video Viewer window by clicking and holding on the frame.</td>
</tr>
</tbody>
</table>
• Align the mouse cursors.
• Refresh the screen.
• Enable or disable Full Screen mode. When Full Screen mode is enabled, the image adjusts to fit the desktop up to a size of 1024 x 768. If the desktop has a higher resolution, the following occurs:
  • The full-screen image is centered in the desktop, and the areas surrounding the Video Viewer window are black.
  • The menu and toolbar are locked so that they are visible at all times.
• Enable automatic, full or manual scaling of the session image:
  • With full scaling, the desktop window remains fixed and the device image scales to fit the window.
  • With automatic scaling, the desktop window is sized to match the resolution of the server being viewed.
  • With manual scaling, a drop-down menu of supported image scaling resolutions is displayed.
• Change the color depth of the session image.

To align the mouse cursors:

Click the Align Local Cursor button in the Video Viewer window toolbar. The local cursor should align with the cursor on the remote device.

**NOTE:** If cursors drift out of alignment, turn off mouse acceleration in the attached device.

To refresh the screen:

Click the Refresh Image button in the Video Viewer window.

-or-

Select View - Refresh from the Video Viewer window menu.

The digitized video image is completely regenerated.

To enable or disable Full Screen mode:

1. To enable Full Screen mode, click the Maximize button.

-or-

Select View - Full Screen from the Video Viewer window menu.

The desktop window disappears and only the accessed device desktop is visible. The screen resizes up to a maximum of 1024 x 768. If the desktop has a higher resolution, then a black background surrounds the full screen image. The floating toolbar appears.

-or-
2. To disable Full Screen mode, click the *Full Screen Mode* button on the floating toolbar to return to the desktop window.

**To enable full or manual scaling:**

To enable full scaling, select *View - Scaling* from the Video Viewer window menu. The device image scales automatically to the resolution of the server being viewed.

-or-

To enable manual scaling, select *View - Scaling* from the Video Viewer window menu. Choose the dimension to scale the window. Available manual scaling sizes are as follows:

```
1024 x 768   768 x 576
960 x 720   704 x 528
896 x 672   640 x 480
832 x 624
```

**Adjusting color depth**

The Dambrackas Video Compression® (DVC) algorithm enables users to adjust the number of viewable colors in a remote session window. You can choose to display more colors for the best fidelity or fewer colors to reduce the volume of data transferred on the network.

Video Viewer windows can be viewed using the Best Color Available (slower updates), Best Compression (fastest updates), a combination of Best Color and Best Compression or in Grayscale.

You can specify the color depths of individual ports and channels by selecting the *View - Color* command in a remote session window. These settings are saved individually per channel.

**Additional video adjustment**

Generally, the Video Viewer window automatic adjustment features optimize the video for the best possible view. However, users can fine-tune the video with the help of Avocent Technical Support by selecting the *Tools - Manual Video Adjust* command in the Video Viewer window menu or clicking the *Manual Video Adjust* button. This displays the Manual Video Adjust dialog box. Video adjustment is a per target setting.

Users can also verify the level of packets per second required to support a static screen by observing the packet rate located in the lower left-hand corner of the dialog box.

**To manually adjust the video quality of the window:**

**NOTE:** The following video adjustments should be made only on the advice and with the help of Avocent Technical Support.

   -or-
   Click the *Manual Video Adjust* button.

   The Manual Video Adjust dialog box appears. Figure 5.2 shows the dialog box, and descriptions follow in Table 5.2.
2. Click the icon corresponding to the feature you wish to adjust.
3. Move the Contrast slider bar and then fine-tune the setting by clicking the Min (−) or Max (+) buttons to adjust the parameter for each icon pressed. The adjustments display immediately in the Video Viewer window.
4. When finished, click Close to exit the Manual Video Adjust dialog box.

**Target video settings**

The Image Capture Width, Pixel Sampling/Fine Adjust, Image Capture Horizontal Position and Image Capture Vertical Position adjustments affect how the target video is captured and digitized and are seldom changed.
The image capture parameters are automatically changed by the Automatic Adjustment function. A special image is required on the target in order to make accurate adjustments independently.

**Contrast and brightness**

If the image in the Video Viewer window is too dark or too light, select *Tools - Automatic Video Adjust* or click the *Automatic Video Adjust* button. This command is also available in the Video Adjustments dialog box. In most cases, this corrects video issues.

When clicking *Auto Adjust* several times does not set the contrast and brightness as desired, adjusting the contrast and brightness manually can help. Increase the brightness. Do not go more than 10 increments before moving the contrast. Generally, the contrast should be moved very little.

**Detection thresholds**

In some cases, noise in the video transmission keeps the packets/sec count up, which is indicated by little dots changing in the area of the cursor when it is moved. Varying the threshold values may result in “quieter” screens and can improve cursor tracking.

You can modify Noise Threshold and Priority Threshold values if you are using standard video compression. You can also modify Block Noise Threshold and Pixel Noise Threshold values. You can restore default threshold values by clicking *Auto Adjust Video*.

**Block Noise Threshold and Pixel Noise Threshold**

The Block Noise Threshold and Pixel Noise Threshold values set the minimum color levels in terms of changed video blocks and pixels per thousand that are allowed.

- The Block Noise Threshold sets the minimum color change that occurs in a single video block. Increasing the value reduces the network bandwidth. Decreasing the value makes the size of these artifacts smaller.
- The Pixel Noise Threshold sets the minimum color change in a single pixel. Decreasing the value reduces the number of low-contrast artifacts, but increases network bandwidth.

See *Adjusting the view* on page 60 for information about changing the color depth.

**Automatic video adjustment**

In most cases, you do not need to alter the Video Settings from the default. The system automatically adjusts and uses the optimal video parameters. The AutoView 3050/3100/3200 switch OBWI performs best when the video parameters are set such that no (0) video packets are transmitted for a static screen.

You can easily adjust your video parameters to ideal settings by clicking on the *Auto Adjust Video* button in the Manual Video Adjust dialog box.

**NOTE:** You can also select *Tools - Automatic Video Adjust* from the Video Viewer window menu or click the *Automatic Video Adjust* toolbar icon to automatically adjust the video.
Refresh Image

Clicking the Refresh Image button in the Manual Video Adjust dialog box completely regenerates the digitized video image.

**NOTE:** You can also select View - Refresh from the Video Viewer window menu to refresh the image.

Video Test Pattern

Clicking the Video Test Pattern button in the Manual Video Adjust dialog box toggles a display of a video test pattern. Click the Video Test Pattern button again to toggle back to a normal video image.

Adjusting mouse options

The Video Viewer window mouse options affect cursor type, Cursor mode, scaling, alignment and resetting. Mouse settings are device-specific; that is, they may be set differently for each device.

**NOTE:** If the device does not support the ability to disconnect and reconnect the mouse (almost all newer PCs do), then the mouse will become disabled and the device will have to be rebooted.

Cursor type

The Video Viewer window offers five appearance choices for the local mouse cursor. You can also choose no cursor or the default cursor.

In Single Cursor mode, the display of the local (second) cursor in the Video Viewer window turns off and only the target device mouse pointer is visible. The only mouse movements that appear are those of the target device remote cursor. Use Single Cursor mode when there is no need for a local cursor. Figure 5.3 shows both the Remote Cursor and the Local Cursor displayed in the Video Viewer window.

![Figure 5.3: Video Viewer Window with Local and Remote Cursors Displayed](image-url)
The Cursor mode status of the Video Viewer window displays in the title bar, including the keystroke that will exit Single Cursor mode. You can define the keystroke that will exit Single Cursor mode in the Session Options dialog box.

NOTE: When using a device that captures keystrokes before they reach the client, you should avoid using those keys to restore the mouse pointer.

Table 5.3: Descriptions for Figure 5.3

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Remote Cursor</td>
</tr>
<tr>
<td>2</td>
<td>Local Cursor</td>
</tr>
</tbody>
</table>

To enter Single Cursor mode:
Select Tools - Single Cursor Mode from the Video Viewer window menu.

-or -
Click the Single Cursor Mode button.
The local cursor does not appear and all movements are relative to the target device.

To select a key for exiting Single Cursor mode:
1. Select Tools - Session Options from the Video Viewer window menu.
   -or -
   Click the Session Options button.
   The Session Options dialog box appears.
2. Click the Mouse tab.
3. Select a terminating keystroke from the drop-down menu in the Single Cursor mode area.
4. Click OK to save settings.

When you enable Single Cursor mode, you can press the specified key to return to Regular Desktop mode.

To exit Single Cursor mode:
Press the key on the keyboard that is identified in the title bar.

To change the mouse cursor setting:
1. Select Tools - Session Options from the Video Viewer window menu.
   -or -
   Click the Session Options button.
The Session Options dialog box appears.

2. Click the Mouse tab.
3. Select a mouse cursor type in the Local Cursor panel.
4. Click OK to save settings.

Mouse scaling

Some earlier versions of Linux did not support adjustable mouse accelerations. For installations that must support these earlier versions, you can choose among three preconfigured mouse scaling options or set your own custom scaling. The preconfigured settings are Default (1:1), High (2:1) or Low (1:2):

- In a 1:1 scaling ratio, every mouse movement on the desktop window sends an equivalent mouse movement to the server.
- In a 2:1 scaling ratio, the same mouse movement sends a 2X mouse movement.
- In a 1:2 scaling ratio, the value is 1/2X.

To set mouse scaling:

1. Select Tools - Session Options from the Video Viewer window menu.
   -or-
   Click the Session Options button.
   The Session Options dialog box appears.
2. Click the Mouse tab.
3. To use one of the preconfigured settings, check the appropriate radio button.
   -or-
   To set custom scaling:
   a. Click the Custom radio button to enable the X and Y fields.
   b. Type a scaling value in the X and Y fields. For every mouse input, the mouse movements are multiplied by the respective X and Y scaling factors. Valid input range is 0.25-3.00.

Vendor-specific video settings

Video settings vary significantly among manufacturers. Avocent maintains an online database of optimized video settings for various video cards, particularly Sun-specific ones. This information can be obtained from Avocent’s online knowledge base or by calling Avocent technical support.

Mouse alignment and synchronization

Because the AutoView 3050/3100/3200 switch OBWI cannot get constant feedback from the mouse, there are times when the mouse on the AutoView 3050/3100/3200 switch may lose sync with the mouse on the host system. If your mouse or keyboard no longer responds properly, you can align the mouse to re-establish proper tracking.
Alignment causes the local cursor to align with the remote server’s cursor. Resetting causes a simulation of a mouse and keyboard reconnect as if you had disconnected and reconnected them.

**To realign the mouse:**

Click the *Align Local Cursor* button in the Video Viewer window toolbar.

### Avocent Mouse Sync

Enabling Avocent Mouse Sync in the KVM session profile provides improved mouse tracking on the target device. If Avocent Mouse Sync is enabled, it is not necessary to disable mouse acceleration on the target device.

**NOTE:** You may only use Avocent Mouse Sync when you are using a USB2 IQ module and the target device is running on a Windows or Macintosh operating system.

**To set Avocent Mouse Sync from the Video Viewer:**

1. Select *Tools - Session Options* from the Video Viewer menu or click the *Session Options* button. The Session Options dialog box appears.

   ![Figure 5.4: Video Viewer Session Options Dialog Box](image)

2. Click the *Mouse* tab.

3. In the Avocent Mouse Sync section, the current status is shown. Select the *Enable Synchronization* checkbox to enable Avocent Mouse Sync.

   - or -

   Deselect the *Enable Synchronization* checkbox to disable Avocent Mouse Sync.
NOTE: On supported system configurations, the Avocent Mouse Sync status is Available. If you are using a USB2 IQ module but the target device cannot support the Avocent Mouse Sync protocol, the status is Unavailable. If you are not using a USB2 IQ module, the status is Not Supported.

4. Click OK.

Using Keyboard Pass-through

Keystrokes that a user enters when using a Video Viewer window may be interpreted in two ways, depending on the Screen mode of the Video Viewer window.

- If a Video Viewer window is in Full Screen mode, all keystrokes and keyboard combinations except Ctrl-Alt-Del are sent to the remote server being viewed.
- If a Video Viewer window is in Regular Desktop mode, Keyboard Pass-through mode can be used to control whether the remote server or local computer recognizes certain keystrokes or keystroke combinations.

Keyboard pass-through must be specified using the Session Options dialog box. When enabled, keyboard pass-through sends all keystrokes and keystroke combinations except Ctrl-Alt-Del to the remote server being viewed when the Video Viewer window is active. When the local desktop is active, keystrokes and keystroke combinations entered by the user affect the local computer.

NOTE: The Ctrl-Alt-Delete keyboard combination can be sent only to a remote server by using a macro.

NOTE: The Japanese keyboard ALT-Han/Zen keystroke combination is always sent to a remote server regardless of the Screen mode or keyboard pass-through setting.

To specify keyboard pass-through:

1. Select Tools - Session Options from the Video Viewer window menu.
   -or-
   Click the Session Options button.
   The Session Options dialog box appears.
2. Click the General tab.
3. Select Pass-through all keystrokes in regular window mode.
4. Click OK to save setting.

Using Macros

The AutoView 3050/3100/3200 switch OBWI comes pre-configured with macros for the Windows and the Sun platforms.

To send a macro:

Select Macros - <desired macro> from the Video Viewer window menu.
Saving the View

You can save the display of a Video Viewer either to a file or to the clipboard for pasting into a word processor or other program.

**To capture the Video Viewer window to a file:**

1. Select *File - Capture to File* from the Video Viewer window menu.
   - or -
   Click the *Capture to File* button.

   The Save As dialog box appears.

2. Enter a filename and choose a location to save the file.
3. Click *Save* to save the display to a file.

**To capture the Video Viewer window to your clipboard:**

Select *File - Capture to Clipboard* from the Video Viewer window menu.

- or -

Click the *Capture to Clipboard* button.

The image data is saved to the clipboard.

Closing a Video Viewer Window Session

**To close a Video Viewer window session:**

Select *File - Exit* from the Video Viewer window.
Chapter 6

Terminal Operations

The Console Menu

Each AutoView 3050/3100/3200 switch may be configured at the appliance level through the Console menu interface accessed through the 10101 port. All terminal commands are accessed through a terminal or PC running terminal emulation software.

To connect a terminal to the AutoView 3050/3100/3200 switch:

1. Using a null modem cable, connect a terminal or a PC that is running terminal emulation software (such as HyperTerminal®) to the 10101 port on the back panel of the AutoView 3050/3100/3200 switch. The terminal settings are 9600 bits per second (bps), 8 bits, 1 stop bit, no parity and no flow control.

2. Turn on each target device and then turn on the AutoView 3050/3100/3200 switch. When the AutoView 3050/3100/3200 switch completes initialization, the Console menu will display the following message: Press any key to continue.

Network Configuration

To configure network settings using the Console menu:

1. When you turn on your AutoView 3050/3100/3200 switch, the switch initializes for approximately one minute. After it completes initialization, press any key on the terminal or on the PC running the terminal emulation software to access the Console menu interface shown in Figure 6.1.

NOTE: The terminal may be connected at any time, even when the switch is already powered.
2. Once the Console Main menu displays, type the number corresponding to Network Configuration and press Enter to access the menu shown in Figure 6.2.
3. Type 1 and press Enter to set your network speed. For best performance, set the AutoView 3050/3100/3200 switch at the same speed as the Ethernet switch to which it is attached. After you press Enter, you will be returned to the Network Configuration menu.

4. Type 2 and press Enter to specify whether you are using IPv4 or IPv6, and whether you are using a static or Dynamic Host Configuration Protocol (DHCP) address.

A static IP configuration may be used to provide a user-defined IP address, netmask or prefix length, and default gateway for the AutoView 3050/3100/3200 switch.

DHCP is a protocol that automates the configuration of TCP/IP-enabled computers. When DHCP is selected, the IP address, netmask or prefix length, and default gateway settings are automatically assigned to the AutoView 3050/3100/3200 switch and may not be modified by an AutoView 3050/3100/3200 switch user.

If you are using the DHCP option, please configure your DHCP server to provide an IP address to the AutoView 3050/3100/3200 switch and then skip to step 6.

5. Select the remaining options from the Network Configuration menu to finish the configuration of your AutoView 3050/3100/3200 switch with an IP address, netmask or prefix length, default gateway and ping response.

6. Type 0 (zero) and press Enter to return to the Console Main menu.

Other Console Main Menu Options

Besides the Network Configuration option, the Console Main menu of the AutoView 3050/3100/3200 switch features the following menu items: Security Configuration, Firmware Management, Enable Debug Messages, Restore Factory Defaults, Reset Appliance and Exit. Each menu item is discussed in this section.

Security Configuration

The Security Configuration menu allows you to enable or disable the Console Password using security for the console (access requires an Admin account).

Console Password

If this is enabled, access to the switch’s Console Main menu will require an appliance administrator to log in.

Firmware Management

This menu contains the Flash Download selection. For more information, see Flash Upgrades section on page 75.

Enable Debug Messages

This menu option turns on console status messages. Because this can significantly reduce performance, you should only enable debug messages when instructed to do so by Avocent Technical Support. When you are finished viewing the messages, press any key to exit this mode.
Restore Factory Defaults

This menu option will restore all switch options to the default settings.

Reset Appliance

This menu option allows you to execute a soft reset of the AutoView 3050/3100/3200 switch.

Exit

This menu selection will return you to the ready prompt. If the Console menu interface password is enabled, you must exit the Console Main menu so that the next user will be prompted with the Username and Password login screen.
Appendix A: Flash Upgrades

The AutoView 3050/3100/3200 switch Flash upgrade feature allows you to update your appliance with the latest firmware available. This update can be performed using a Trivial File Transfer Protocol (TFTP) server or using the OBWI.

After the Flash memory is reprogrammed with the upgrade, the AutoView 3050/3100/3200 switch performs a soft reset, which terminates all IQ module sessions. A target device experiencing an IQ module firmware update may not display, or may display as disconnected. The target device will appear normally when the Flash update is completed.

**NOTE:** During an upgrade, the IQ module status indicator in the OSCAR interface Main dialog box is yellow.

**CAUTION:** Disconnecting an IQ module during a firmware update or cycling power to the target device will render the module inoperable and require the IQ module to be returned to the factory for repair.

**Using the Console menu interface**

To upgrade the AutoView 3050/3100/3200 switch firmware using the Console menu interface:

**NOTE:** You may only update the AutoView 3050/3100/3200 switch firmware using the Console menu interface when using IPv4 mode.

**NOTE:** If you do not have a TFTP server, you can find several shareware and freeware programs on the Internet that you can download and install.

1. Visit [http://www.avocent.com/support](http://www.avocent.com/support) and download the latest Flash firmware from Avocent.
2. Save the Flash upgrade file to the appropriate directory on the TFTP server.
3. Use the null modem cable to connect a terminal or PC running terminal emulation software (such as HyperTerminal) to the SETUP, CONSOLE or 10101 port on the back panel of the AutoView 3050/3100/3200 switch. The terminal should be set to 9600 bps, 8 bits, 1 stop bit, no parity and no flow control.
4. If the AutoView 3050/3100/3200 switch is not on, turn it on now. After approximately one minute, press any key to access the Console Main menu.
5. Select the **Firmware Management** option from the Console Main menu.

**NOTE:** The current version of your firmware will be displayed on the Firmware Management menu.

6. Type **1** and press Enter to access Flash Download.
7. Type the IP address of your TFTP server and press Enter.
8. Enter the name of the file that you downloaded from the Avocent web site.
9. Confirm the TFTP download by typing a y or yes and pressing Enter.

10. The AutoView 3050/3100/3200 switch will begin the Flash upgrade process. On-screen indicators will display the upgrade progress. When the upload is complete, the AutoView 3050/3100/3200 switch will reset and upgrade the internal subsystems.

11. Once the upgrade is complete, the login screen will appear.

Using the OBWI

This method utilizes an HTTP binary upload and does not require the use of a TFTP server. To upgrade the firmware, you will download the upgrade file to the client computer from which you will initiate the firmware upgrade.

To upgrade the AutoView 3050/3100/3200 switch firmware:

1. From the side navigation bar, select Appliance - Overview. The Appliance Overview window appears.
2. Click Tools - Upgrade Appliance. The Upgrade Firmware File window appears.
3. Click Browse to specify the location of the firmware upgrade file.
4. Click Upgrade.

Recovering from a failed Flash upgrade

**NOTE:** If the green power LED on the front and back panel of the switch blinks continuously, the switch is in recovery mode.

To recover from a failed Flash upgrade:

1. Visit http://www.avocent.com/support and download the latest Flash firmware from Avocent.
2. Save the Flash upgrade file to the appropriate directory on the TFTP server.
3. Set up the TFTP server with the server IP address 10.0.0.3.
4. Rename the downloaded file the appropriate name from the following list and place it into the TFTP root directory of the TFTP server:
   - AV3050.fl
   - AV3x00.fl
5. If the AutoView 3050/3100/3200 switch is not on, turn it on now.
6. The recovery process should start automatically.
Appendix B: Using Serial IQ Modules

The serial IQ module is a serial-to-VGA converter that allows VT100-capable devices to be viewed from the AutoView 3050/3100/3200 switch local port or the OBWI. The actual serial data is not accessed, but is merely displayed. All serial data coming from the target device is displayed in a VT100 window, placed into a video buffer and sent to the AutoView 3050/3100/3200 switch as though it came from a VGA target. Likewise, keystrokes entered on a keyboard are sent to the attached device as though they were typed on a VT100 terminal.

Serial IQ module modes

The following modes can be accessed from the serial IQ module:

- On-Line: This mode enables you to send and receive serial data.
- Configuration: This mode enables you to specify AutoView 3050/3100/3200 switch communication parameters, the appearance of the Terminal Applications menu and key combinations for specific actions and macros.
- History: This mode enables you to review serial data.

Configuring the serial IQ module

**NOTE:** The serial IQ module is a DCE device and only supports VT100 terminal emulation.

Pressing **Ctrl-F8** will activate the Configuration screen of the IQ module’s Terminal Applications menu, which enables you to configure your serial IQ module.

**NOTE:** When any Terminal Applications menu is active, pressing **Enter** saves changes and returns you to the previous screen. Pressing **Escape** returns you to the previous screen without saving changes.

Within the Terminal Applications menu’s Configuration screen, you can modify the following options:

- Baud Rate: This option allows you to specify the serial port communications speed. Available options are 300, 1200, 2400, 9600, 19,200, 34,800, 57,600 or 115,200 bps. The default value is 9600.
- Parity: This option allows you to specify the serial port’s communications parity. Available options are EVEN, ODD or NONE. The default value is NONE.
- Flow Control: This option allows you to specify the type of serial flow control. Available options are NONE, XOn/XOff (software) and RTS/CTS (hardware). The default value is NONE. If you select a bps rate of 115,200, the only available flow control is RTS/CTS (hardware).
- AutoView 3050/3100/3200/CD Mode: This option allows you to control how the AutoView 3050/3100/3200 switch and CD lines operate. Available options are Always on and Toggle. When in Toggle mode, AutoView 3050/3100/3200 and CD lines are turned off for one-half second and then turned on each time a module is selected or deselected. The default value is Always on.
- **Enter Sends:** This option enables you to specify the keys that are transmitted when **Enter** is pressed. Available options are `<CR>` (Enter), which moves the cursor to the left side of the screen, or `<CR><LF>` (Enter-Linefeed), which moves the cursor to the left side of the screen and down one line.

- **Received:** This option enables you to specify how the module translates a received **Enter** character. Available options are `<CR>` (Enter) or `<CR><LF>` (Enter-Linefeed).

- **Background:** This option changes the screen’s background color. The currently-selected color displays in the option line as it is changed. Available colors are Black, Light Grey, Yellow, Green, Teal, Cyan, Blue, Dark Blue, Purple, Pink, Orange, Red, Maroon and Brown. The default color is Black. This value cannot be identical to the Normal Text or Bold Text value.

- **Normal Text:** This option changes the screen’s normal text color. The currently-selected color displays in the option line as it is changed. Available colors are Grey, Light Grey, Yellow, Green, Teal, Cyan, Blue, Dark Blue, Purple, Pink, Orange, Red, Maroon and Brown. The default color is Grey. This value cannot be identical to the Bold Text or Background value.

- **Bold Text:** This option changes the screen’s bold text color. The currently-selected color displays in the option line as it is changed. Available colors are White, Yellow, Green, Teal, Cyan, Blue, Dark Blue, Purple, Pink, Orange, Red, Maroon, Brown and Light Grey. The default color is White. This value cannot be identical to the Normal Text or Background value.

- **Screen Size:** This option allows you to specify the screen’s text width size. Available values are widths of 80 columns or 132 columns. The length for both widths is 26 lines.

The following options for the Terminal Application menu’s Configuration screen enable you to define the function keys that will perform a selected action. To specify a new function key, press and hold the **Ctrl** key, then press the function key that you want to associate with the action. For example, if you want to change the Configuration (Config) Key Sequences option from `<CTRL-F8>` to `<CTRL-F7>`, press and hold the **Ctrl** key and then press **F7**.

- **Config Key Sequences:** This option allows you to define the key combination that makes the Terminal Application menu’s Configuration screen appear. The default key sequence is **Ctrl-F8**.

- **On-Line Key Sequence:** This option allows you to define the key sequence that displays the On-Line mode. The default key sequence is **Ctrl-F10**.

- **Help Key Sequence:** This option allows you to define the key combination that displays the Help System screen. The default key sequence is **Ctrl-F1**.

- **History Key Sequence:** This option allows you to define the key combination that enables History mode. The default key sequence is **Ctrl-F9**.

- **Clear History Key Sequence:** This option allows you to define the key combination that clears the history buffer while in History mode. The default key sequence is **Ctrl-F11**.

- **Break Key Sequence:** This option allows you to configure the key combination that generates a break condition. The default key sequence is **Alt-B**.
To configure a serial IQ module:
2. Select a parameter to change. You can navigate the Configuration Screen using the Up Arrow and Down Arrow keys.
3. Modify the selected value using the Left Arrow and Right Arrow keys.
4. Repeat steps 2 and 3 to modify additional values.
5. Press Enter to save your changes and exit the Configuration Screen.
   -or-
   Press Escape to exit the Configuration Screen without saving the changes.

Creating a serial IQ module macro

Pressing the Page Down key when the Terminal Applications menu’s Configuration screen is displayed will provide access to the Macro Configuration screen. The serial IQ module can be configured with up to 10 macros. Each macro can be up to 128 characters in length.

To create a macro:
1. Select the serial IQ module you wish to configure and press Ctrl-F8 to activate the Terminal Applications menu’s Configuration screen.
2. When the Terminal Applications menu appears, press Page Down to view the Macro Configuration screen. The Macro Configuration screen shows the 10 available macros and the associated key sequences, if any, for each.
3. Using the Up Arrow and Down Arrow keys, scroll to an available macro number and highlight the listed keystroke sequence. Type the new macro keystroke sequence over the default. Any combination of Ctrl or Alt and a single key may be used. When you have finished entering the keystroke sequence that will activate the new macro, press the Down Arrow key.
4. On the line below the macro keystroke sequence you just entered, type the keystroke sequence that you wish the macro to perform.
5. Repeat steps 3 and 4 to configure additional macros.
6. When finished, press Enter to return to the previous screen.

Using History mode

History mode allows you to examine the contents of the history buffer, which contains the events that have occurred.

The serial IQ module maintains a buffer containing 240 lines minimum, or 10 screens, of output. When the history buffer is full, it will add new lines at the bottom of the buffer and delete the oldest lines at the top of the buffer.

NOTE: The Config Key Sequence, On-Line Key Sequence and Clear History Key Sequence used in the following procedure are the default values. These key combinations can be changed using the Terminal Applications menu.
To use History mode:

1. Press **Ctrl-F9**. The mode will display as History.

2. Press one of the following key combinations to perform the indicated action:
   - **Home**: Move to the top of the buffer.
   - **End**: Move to the bottom of the buffer.
   - **Page Up**: Move up one buffer page.
   - **Page Down**: Move down one buffer page.
   - **Up Arrow**: Move up one buffer line.
   - **Down Arrow**: Move down one buffer line.
   - **Ctrl-F8**: Enters Configuration mode. The Configuration screen will appear.
   - **Ctrl-F9**: While in Configuration mode, returns to the previous screen with History mode enabled.
   - **Ctrl-F10**: While in Configuration mode, returns to the previous screen with On-Line mode enabled.
   - **Ctrl-F11**: Clears the history buffer. If you choose this option, a warning screen will appear. Press **Enter** to delete the history buffer or **Escape** to cancel the action. The previous screen will reappear.

3. When finished, press **Ctrl-F10** to exit History mode and return to On-Line mode.

Appendix C: UTP Cabling

This appendix discusses various aspects of connection media. The performance of an AutoView 3050/3100/3200 switching system depends on high quality connections. Poor quality or poorly installed or maintained cabling can diminish AutoView 3050/3100/3200 system performance. AutoView 3050/3100/3200 switching systems utilize UTP cabling.

**NOTE:** This appendix is for information purposes only. Please consult with your local code officials and/or cabling consultants prior to any installation.

UTP copper cabling

The following are basic definitions for the three types of UTP cabling that the AutoView 3050/3100/3200 switch supports:

- UTP (4-pair) high performance cable consists of twisted pair conductors, used primarily for data transmission. The twisting of the pairs gives this cable some immunity from the infiltration of unwanted interference. UTP cable is generally used for networks running at 10 or 100 Mbps.
- CAT 5E (enhanced) cable has the same characteristics as CAT 5, but is manufactured to somewhat more stringent standards.
- CAT 6 cable is manufactured to tighter requirements than CAT 5E cable. CAT 6 has higher measured frequency ranges and significantly better performance requirements than CAT 5E cable at the same frequencies.

Wiring standards

There are two supported wiring standards for 8-conductor (4-pair) RJ-45 terminated UTP cable: EIA/TIA 568A and B. These standards apply to installations utilizing CAT 5, 5E and 6 cable specifications. The AutoView 3050/3100/3200 switching system supports either of these wiring standards. Table C.1 describes the standards for each pin.

</tbody>
</table>
The following is a list of important safety considerations that should be reviewed prior to installing or maintaining your cables:

- Keep all UTP runs to a maximum of 100 feet each.
- Maintain the twists of the pairs all the way to the point of termination, or no more that one-half inch untwisted. Do not skin off more than one inch of jacket while terminating.
- If bending the cable is necessary, make it gradual with no bend sharper than a one inch radius. Allowing the cable to be sharply bent or kinked can permanently damage the cable’s interior.
- Dress the cables neatly with cable ties, using low to moderate pressure. Do not over tighten the ties.
- Cross-connect cables where necessary, using rated punch blocks, patch panels and components. Do not splice or bridge the cable at any point.
- Keep the UTP cable as far away as possible from potential sources of EMI, such as electrical cables, transformers and light fixtures. Do not tie the cables to electrical conduits or lay the cables on electrical fixtures.
- Always test every installed segment with a cable tester. “Toning” alone is not an acceptable test.
- Always install jacks so as to prevent dust and other contaminants from settling on the contacts. The contacts of the jack should face up on the flush mounted plates, or left/right/down on surface mount boxes.
- Always leave extra slack on the cables, neatly coiled in the ceiling or nearest concealed location. Leave at least five feet at the work outlet side and 15 feet at the patch panel side.
- Choose either 568A or 568B wiring standard before beginning. Wire all jacks and patch panels for the same wiring scheme. Don’t mix 568A and 568B wiring in the same installation.
- Always obey all local and national fire and building codes. Be sure to firestop all the cables that penetrate a firewall. Use plenum rated cable where it is required.

Appendix E: Sun Advanced Key Emulation

Certain keys on a standard Type 5 (US) Sun keyboard can be emulated by key press sequences on a PS/2 keyboard. To enable Sun Advanced Key Emulation mode and use these keys, press and hold Ctrl+Shift+Alt and then press the Scroll Lock key. The Scroll Lock LED blinks. Use the indicated keys in Table E.1 as you would use the advanced keys on a Sun keyboard.

### Table E.1: Sun Key Emulation

</tbody>
</table>

\(^{(1)}\)Windows 95 104-key keyboard.
\(^{(2)}\)The Command key is the Sun Meta (diamond) key.
For example: For Stop + A, press and hold Ctrl+Shift+Alt and press Scroll Lock, then F1 + A. These key combinations will work with the serial USB IQ module (if your Sun system comes with a USB port) as well as the Sun VSN and WSN IQ modules. With the exception of F12, these key combinations are not recognized by Microsoft Windows. Using F12 performs a Windows key press.

When finished, press and hold Ctrl+Shift+Alt and then press the Scroll Lock key to toggle Sun Advanced Key Emulation mode off.

**Special considerations for Japanese Sun USB and Korean Sun USB keyboards (USB IQ modules only)**

Japanese Sun USB and Korean Sun USB keyboards assign usage IDs for certain keys that differ from standard USB usage IDs. If USB IQ modules are attached to your Sun servers, the Han/Zen and Katakana/Hiragana keys on Japanese Sun USB keyboards and Hangul and Hanja keys on Korean Sun USB keyboards must be accessed using alternate keystrokes. Due to these keyboard-specific differences, keyboard mapping inconsistencies may be encountered when switching between target devices using Sun VSN and WSN IQ modules and target devices using USB IQ modules. These keys function normally if your Sun servers are attached to the AutoView 3050/3100/3200 switch using a VSN or WSN IQ module.

Table E.2 lists the keyboard mapping that will take place when a USB IQ module is used in this setting.

**Table E.2: PS/2-to-USB Keyboard Mappings**

Appendix F: Technical Support

Our Technical Support staff is ready to assist you with any installation or operating issues you encounter with your Avocent product. If an issue should develop, follow the steps below for the fastest possible service.

To resolve an issue:

1. Check the pertinent section of this manual to see if the issue can be resolved by following the procedures outlined.
2. Check our web site at www.avocent.com/support to search the knowledge base or use the online service request.
3. Call the Avocent Technical Support location nearest you.
