Liebert® PPC™
Second Generation Power Distribution Cabinet
Creating high quality power is a major step towards protecting the operation of a critical facility. But don’t stop there. Once you’ve created a better level of power, you need to make sure that it can be distributed properly to each piece of important equipment.

Critical Power Distribution Made Easy
This is why Emerson Network Power designed the Liebert® PPC™ Second Generation to bring you a distribution system that will close the power delivery loop in your critical facility. The Liebert PPC offers the benefits of a custom-tailored power system, with the convenience and cost savings of a pre-packaged, factory-tested unit. Housed in a single, self-contained cabinet, it combines distribution, computer-grade grounding, isolation, and power monitoring to provide the protection your vital computer or communications equipment demands. Available in 15-225 kVA capacity systems for raised floor applications and top-exit models, the Liebert PPC offers flexible expansion capabilities to fit growing sites. The 150kVA, 200kVA, 225kVA, 300kVA, 430kVA and 800kVA are available with Square D I-Line panelboard distribution which extend the Liebert PPC line giving you more flexibility and more capacity in one cabinet.

A Proven System
The packaged system approach of the Liebert PPC is convenient and space-saving, reducing installation time and cost compared to a conventional approach using multiple interconnected components. The Liebert PPC is built on a proven system design used in thousands of installations, and unlike one-of-a-kind, built-up distribution constructed at the site, it undergoes thorough factory testing as a complete system to assure reliable, consistent performance.

The Liebert PPC Offers A Number Of Benefits:

Reliability
- Improved Power Quality — Results in optimum equipment operation, reducing downtime and extending service life.
- Computer-Grade Grounding — The Liebert PPC automatically establishes a single point ground to meet major manufacturers’ recommendations and the requirements of the National Electric Code.
- Monitoring — Built-in metering and alarm annunciation with communication capabilities to Liebert centralized monitoring.

Flexibility
- Handles Non-Linear Loads — Fully compatible with the non-linear loads and other electronic equipment.
- Expansion Capability — Add-on panelboards, optional Liebert EXC™ and flexible cabling can be installed with minimal disruption to meet growing needs.
- Location Flexibility — The unit can be easily relocated to protect your investment.
- UL and ULc Listed as a Complete System — Meets safety requirements for fast, hassle-free inspection and building code approvals.

Low Total Cost Of Ownership
- Space Savings — Compact single cabinet conserves valuable floor space.
- Easy Installation — Single input cable connection reduces installation time and cost.
- TP-1 Listed Isolation Transformer — Provides increased efficiency.
A Noticeable Improvement
In Power Quality
There are a number of integral features that allow Liebert® PPC™ Second Generation to offer a higher quality level of electrical power for your critical applications:

- The main input breaker with low voltage shunt trip accessory provides primary transformer overcurrent protection, a power disconnecting means, and a method to interface with shutdown controls.
- Double-Shielded, copper, TP-1 Listed Isolation Transformer that provides higher efficiency than standard transformers.
- Supplemental transformer protection is provided by temperature sensors in each winding to alarm abnormally high winding temperature or shutdown unit before isolation damage.
- One or more, individually enclosed panelboards with panelboard main breaker and individual isolated neutral and ground busbars distribute power to the sensitive load equipment.
- Output conduit landings are provided for each output panelboard to accommodate the large number of dedicated branch circuits recommended for sensitive electronic loads.
- Oversized neutral components safely withstand neutral currents of at least 1.73 times full load currents.
- System shutdown controls, including manual restart, overtemperature shutdown and emergency power off, are included.
- Optional shielded output cables for each load reduce EMI and RFI.

The Liebert PPC approach gives you an easily installed package — a single power connection to the building wiring simplifies hook-up and reduces installation time and cost. Flexible cables can be specified in lengths and sizes to match sensitive electronic loads, making the system easy to relocate or expand. A choice of service access allows greater location flexibility and smaller installed footprint. And since the power source is right there in the room, it eliminates difficulties in establishing a proper ground. The system also eliminates potentially harmful harmonic neutral current from the building wiring system.
Several key features have allowed Emerson Network Power to build a packaged power distribution system that combines a high level of power quality effectiveness with a cost that is less than conventional built-up systems.

Computer Grade Grounding
The Liebert PPC™ Second Generation establishes a single point ground for the critical load. Power ground and computer ground points are identical minimizing ground-loop currents and common mode disturbances. Short output cables maintain the integrity of the isolation and conditioning.

Secure Distribution And Circuit Identification
Distribution panels are in the computer room which limits access to authorized personnel only. Each breaker has an adjacent identification tag for rapid circuit ID. Each output cable is labeled at each end with circuit number, length, type of receptacle and circuit identification.

Non-Linear Load Compatibility
The basic Liebert PPC is designed to accommodate moderate levels of harmonic currents. Where severe levels of harmonic currents are anticipated, a K-Factor transformer option for harmonic current cancellation is available.

Optional System Enhancements
A host of options enable you to design the Liebert packaged power system to your exact needs:

- A Liebert EXC™ can be placed adjacent to Liebert PPC, adding up to six additional panel boards.
- Transient voltage surge suppression (TVSS) is available for increased protection from damaging voltage surges. Very short interconnecting wiring provides superior surge clamping performance.
- K20 transformer safely withstands high harmonic currents associated with electronic loads without derating.
System Monitoring
Enhances Visibility and Performance

Panelboard Monitoring
The integral **Current Plus Monitoring (CPM)** optional display monitors the current and voltage of the panelboard. The display includes a monochrome LCD, power and alarm LEDs, audible alarm, and a silence push button. It provides true RMS measurements and battery backed memory.

Monitored parameters include:
- Voltage - Line-to-Line
- Neutral Current
- kVA
- Voltage Total Harmonic
- Current Total Harmonic

- Voltage - Line-to-Neutral
- Ground Current
- Power Factor
- Distortion (THD)
- Crest Factor

Branch Circuit Monitoring
Advanced monitoring is available through the optional **Liebert® Distribution Monitoring (LDMF)** display. This option provides a large LCD screen that allows viewing of monitored information for the panelboard as well as each individual branch circuit breaker. Alarm data may be viewed from this display for up-to-date breaker status. It provides true RMS measurements and battery backed memory.

Monitored parameters are the same as those for the CPM monitor, plus for each branch circuit:
- Phase current
- kW-hours
- Percent load

Centralized Monitoring
An optional Liebert SiteScan® interface allows centralized monitoring of the Liebert PPC™ Second Generation.

A Liebert IntelliSlot™ communications card may be installed to allow monitoring through a Building Management System (BMS). RJ-45 Ethernet and BACnet options are available.

- Voltage - Line-to-Line
- Neutral Current
- kVA
- Voltage Total Harmonic
- Current Total Harmonic
- Voltage - Line-to-Neutral
- Ground Current
- Power Factor
- Distortion (THD)
- Crest Factor

Central Monitoring Interface
Liebert PPC are compatible with our Liebert SiteScan centralized monitoring systems, allowing single point monitoring and alarm of power conditions. These microprocessor-based systems provide historical data on room conditions for future requirement planning and troubleshooting. In addition, for communication of monitored parameters and alarm information to other monitoring systems. Liebert IntelliSlot SNMP/Web, Modbus over IP and Modbus 485 cards can also be used to enable cost-effective monitoring of a Liebert PPC by your facility or network monitoring system.

Event Management And Reporting
Liebert SiteScan Web will show you exactly where the problem is—not some cryptic message that will leave you guessing. Events and alarms associated with a specific system, area or equipment selected in the navigation tree are displayed. This view allows you to monitor alarm or event information geographically, as well as to acknowledge events, sort events by category, actions and verify reporting actions.

Data Analysis And Trend Reporting
With Liebert SiteScan Web you get powerful tools to analyze data and use it to prevent specific problems from occurring again. The operator can view trends by using the navigation tree and selecting the “trends” button in the graphic window. Users can create custom trend data that consist of one or more multiple data points.
**Raising The Standard Of Power In Non-Raised Floor Applications**

The innovative top-exit Liebert® PPC™ Second Generation takes packaged power systems to new heights...literally. By placing the input and output conduit connections at the top of the unit, the top-exit Liebert PPC brings the benefits of high quality packaged power systems to non-raised floor applications. What’s more, the unit retains the normal bottom output cable exit for easy relocation and expansion flexibility.

**Added Flexibility Enables You To Bring Packaged Power To Even More Locations**

Ideal for conditioned grade power distribution in applications where there is no raised floor, the top-exit Liebert PPC brings the flexibility and space-saving benefits of a packaged power system to a variety of applications:

- Office areas
- LANS
- Laboratories
- High-tech manufacturing sites
- Process control rooms
- Medical imaging suites
- Grouped workstations

**High Efficiency Power Distribution In Far Less Space**

Compared to a conventional power distribution system built at the site and using multiple interconnected components, the top-exit Liebert PPC provides a much smaller footprint, reduced installation time, less cost and easier service access.

*Conventional System = 47.7 Sq. Ft.  PPC = 37.8 Sq. Ft.*

### 1-Line Panel Board

**kVA: 15-225, 3-phase Input**
3-phase, 3 wire plus ground
208, 480, or 600 volts; 60 Hz
208, 380, 400 or 415 volts; 50 Hz
(Transformerless system require 3-phase, 4W & G)

**Output**
3-phase, 4 wire plus ground
120/208 volts; 60 Hz
120/208, 220/380, 230/400, or 240/415 volts; 50 Hz

**Transformer:** TP1 Double-Shielded, all copper windings.
Class H 220°C insulation.

**Voltage Adjustments:** -10% to +5% of nominal in 2 1/2% increments

**Noise Attenuation:**
120 dB common mode

**Efficiency:** 96 to 98.6%

**Ground:** Single-point reference on separately derived systems

**Distribution:** Individually protected panelboards with plug-in or bolt-on breakers and optional flexible output cables.

**Cooling System:** Convection

**Monitored Parameters:** Input and output voltages; Output, neutral and ground currents; Output voltage THD; Output current THD, K-factor and crest factor; kVA; kW; Power factor; Percent load; kW-Hrs; and Frequency.

**Alarm Conditions:** Output over- and under-voltages; output overload; neutral and ground over currents; output voltage THD; transformers over temperature; frequency deviation; phase sequence error; phase loss; 5 customer specified alarm conditions.

The standard output voltage is 208/120 volts, for 60 Hz units.
* Other voltages available, consult factory.
** Models are 44" (112cm) wide.
*** A maximum of eleven 250A frame or eight 400A LA frame or six 600A LI frame output breakers can be installed in a Square D I-Line panelboard. 800kVA has two Square D I-Line panelboards.
Ensuring The High Availability Of Mission-Critical Data And Applications.

Emerson Network Power, a business of Emerson (NYSE:EMR), delivers software, hardware and services that maximize availability, capacity and efficiency for data centers, healthcare and industrial facilities. A trusted industry leader in smart infrastructure technologies, Emerson Network Power provides innovative data center infrastructure management solutions that bridge the gap between IT and facility management and deliver efficiency and uncompromised availability regardless of capacity demands. Our solutions are supported globally by local Emerson Network Power service technicians. Learn more about Emerson Network Power products and services at www.EmersonNetworkPower.com
