Government

As government agency networks grow and change, new technologies are pushing the limits of traditional power protection strategies. Power demands and equipment densities are rising, and agency officials, employees, and the public are requiring greater physical security and energy efficiency of IT equipment and facilities. Emerging technologies, such as IP telephony with its high-availability requirements, require new power protection strategies.

Liebert has your solution, featuring:

- Unmatched application expertise from decades of protecting the world's most reliable IT systems
- Comprehensive customer support, including a network of local technical experts and a global service organization
- An adaptive technology architecture that provides maximum flexibility, scalability and network availability with the lowest total cost of ownership

- A platform of power, cooling, monitoring and service support technologies that can meet the fast-changing requirements of mission-critical networks

Whether your challenges focus on physical security, energy efficiency, growth and flexibility, or the sheer velocity of change, Liebert can provide high-availability solutions for every application.

Capabilities and configuration to meet any application

Liebert is the only vendor capable of providing power protections, mission-critical cooling, monitoring, and local support and service solutions for vital government networks, from the power line to the desktop.

COMPUTER ROOM PROTECTION

Liebert delivers scalable power and cooling technology for data centers and computer rooms of any size. Solutions include::

- Precision cooling for controlling heat and humidity
- Affordable, scalable UPS in both single-phase and three-phase versions that provide high levels of energy efficiency
- Racks and enclosures that improve space utilization, support quick reconfiguration,

and offer superior equipment and cable management

- Advanced power strips to monitor and control power distribution all the way down to single devices, locally or remotely, throughout your network.
- Critical monitoring and control software for 24/7 management.

NETWORK CLOSET PROTECTION

As you build out your network — especially for high-availability applications like VoIP — Liebert has what you need to ensure high levels of uptime in server and telecom closets:

- Flexible racks and enclosures that can be reconfigured or even re-sized, quickly and easily
- Rack-mount UPS featuring double-conversion technology for maximum protection from all types of power disturbances

- Advanced power strips to monitor and control power distribution all the way down to single devices, locally or remotely, throughout your network
- Rack-mount and precision cooling systems to control heat and humidity

DESKTOP AND PERIPHERAL PROTECTION

Liebert has a wide range of power protection products for desktop computers and office peripherals:

- Scalable UPS that reduce energy costs over individual UPS units.
- Double-conversion UPS technology that protects against all types of power disturbances
- Battery backup over extended outages, or through the critical period of transition to other backup power sources
- Automatic battery testing and monitoring
