Government

As public utility IT networks grow and change, new technologies are pushing the limits of traditional power protection strategies. Power demands and equipment densities are increasing, new applications for IP telephony and wireless technology require higher availability, and agency managers are demanding greater reliability.

Liebert has your solution, featuring:

- Unmatched application expertise from decades of protecting the world's most reliable IT systems

- Comprehensive customer support, including a network of local technical experts and a global service organization
- An adaptive technology architecture that provides maximum flexibility, scalability and network availability with the lowest total cost of ownership
- A platform of power, cooling, monitoring and service support technologies that can meet the fast-changing requirements of mission-critical networks

Whether your challenges are in computer rooms, network closets, or remote equipment shelters, Liebert can provide high-availability solutions for every application.

Capabilities and configuration to protect any application

Liebert is the only vendor capable of providing power protection, mission-critical cooling, monitoring, and local support and service solutions for vital networks, from the power line to the desktop.

COMPUTER ROOMS AND OPERATIONS CENTERS

Liebert delivers scalable power protection and cooling technology for operations centers of any size. Solutions include:

- Precision cooling for controlling heat and humidity
- Affordable, scalable UPS in both single-phase and three-phase versions
- Racks and enclosures that improve space utilization, support quick reconfiguration,

and offer superior equipment and cable management.

- Advanced power distribution for monitoring and control all the way down to single devices, locally or remotely, throughout your network
- Critical monitoring and control software for local or remote management 24/7

REMOTE NETWORK NODES

If your network includes remote sensors and monitors — or even router/switch racks in equipment closets — Liebert has what you need to ensure high levels of uptime at the network edge:

- Double-conversion UPS that deliver clean power to test and monitoring equipment
- Flexible racks and enclosures that can be reconfigured, even re-sized, quickly and easily
- Rack-mount UPS featuring double-conversion technology for maximum protection from all types of power disturbances
- Advanced power distribution for monitoring and control all the way down to single devices, locally or remotely, throughout your network

- Rack-mount and precision cooling systems to control heat and humidity
- Remote monitoring systems for a comprehensive, real-time picture of your entire operation

DESKTOP AND PERIPHERAL PROTECTION

Liebert has a wide range of power protection products for desktop computers and office peripherals.

- Cost-effective power protection, including surge suppression on both power and communication lines
- 4-5 minutes of battery backup at full load; enough time to save data and shut down properly
- Automatic battery testing and monitoring
