

Solution Services

Portfolio Overview

■ Embedded Computing for Business-Critical Continuity™

Design Services

- Development Consulting
- Development Support
- Application Porting
- Benchmarking
- Performance Analysis
- System Concept Design
- Regulatory Testing
- Engineering Support

Deployment Services

- Technical Support
- Warranty Services
- Repair Services
- On-Site Support
- Installation Support
- Logistics Programs
- Revision Management
- Root Cause Analysis
- Product Specific Technical Training
- OpenSAF Software Training

Renewal Services

- Longevity of Repair
- Longevity of Support
- Continuity of Supply
- Product Migration Consultation
- Platform Technology Insertion

COMPLETE LIFECYCLE SUPPORT

As the Embedded Computing industry leader, we have a deep knowledge of our customers, their diverse markets, product applications and environments. Our understanding of these requirements led to the creation of the Solution Services portfolio. This portfolio is a suite of services designed to meet our customers' needs at each phase of their product lifecycle.

The Solution Services portfolio has three focus service offerings based on typical product development and lifecycles: Design, Deployment and Renewal.

DESIGN SERVICES

This lifecycle phase includes all the activities associated with product concept design and development, field trials and preparation for market release. You need to complete your project in the shortest amount of time with the least number of changes or redesign cycles. During product design and development, your team is faced with integrating an increasingly complex array of technologies into a comprehensive solution. Our Design Services can help to reduce this complexity, while compressing development cycles and provide rapid commercialization of new technologies. From architectural consulting to frame and shelf integration engineering, we can provide the right support to your development team. With Emerson's design consultation, development and benchmarking services, you can focus scarce resources on strategic engineering tasks. Emerson's Design Services team has expertise in the latest technologies and can coordinate with your program management team to ensure seamless integration into your final product solution.

DEPLOYMENT SERVICES

Deployment Services are designed to protect your product investment after release to your customers or markets. You need to ensure customer satisfaction while maintaining a predictable support cost model. Even if you have your own services organization, our Deployment offerings can complement and extend your service portfolio.

Emerson Deployment Services offer an extensive array of services applicable to your product deployment phase. We provide complete offerings in every phase of the support chain that include product repair, technical support, supply chain services, revision management, and logistics services, that may be necessary to maintain your product in the field.

RENEWAL SERVICES

As your product moves into the mature stage of its lifecycle, you may be faced with challenges that include long-term support for customers not ready to move to newer products, finding ways to increase the current product's performance and/or functionality, as well as migrating legacy applications and functionality on to new platforms. With our Renewal Services we have solutions for each of these challenges. Emerson can assist with long-term support via services that provide limited manufacture of a discontinued product as well as long-term repair capability. Our consulting services are available to assist you with technology insertion into an existing platform to extend the useful lifecycle. If your product plans call for migrating applications and functionality to newer Emerson platforms, our technology architects can help you with hardware and software design support to ensure a smooth migration.

SOLUTION SERVICES

Emerson Network Power provides a portfolio of solution services optimized to meet your needs throughout the product lifecycle. Design services help speed time-to-market. Deployment services include global 24x7 technical support. Renewal services enable product longevity and technology refresh.

This document identifies products, their specifications, and their characteristics, which may be suitable for certain applications. It does not constitute an offer to sell or a commitment of present or future availability, and should not be relied upon to state the terms and conditions, including warranties and disclaimers thereof, on which Emerson Network Power may sell products. A prospective buyer should exercise its own independent judgment to confirm the suitability of the products for particular applications. Emerson Network Power reserves the right to make changes, without notice, to any products or information herein which will, in its sole discretion, improve reliability, function, or design. Emerson Network Power does not assume any liability arising out of the application or use of any product or circuit described herein; neither does it convey any license under its patent or other intellectual property rights or under others. This disclaimer extends to any prospective buyer, and it includes Emerson Network Power's licensee, licensee's transferees, and licensee's customers and users. Availability of some of the products and services described herein may be restricted in some locations.
